

Elegant Ballad.
'Twas on a cliff, whose rocky base
Bathed the blue wave;
Whose cultured height, their verdant store
To many a tent gave.

A mother, led by rustic cares,
Had wandered with her child;
Unweaned the babe—yet on the grass
He frolicked and he smiled.

With wish, delight the mother glowed
To mark the infant's joy;
How oft would pause and hold her toll
To contemplate her boy.

Yet soon by other cares estranged,
Here thought the child forgot;
Careless he wandered on the ground,
Nor caught his mother's look.

Cropped with each flower, that met his eye,
'Till scrambling for the green,
He gained the cliff's unsheltered edge,
And pleased, surveyed the scene.

'Twas now the mother, from her toll,
Turned to behold her child—
The wretch gazed—her cheeks were flushed—
Her wandering eye was wild.

She saw him on the cliff's rude brink—
No careless peeping before—
He turned, and to his mother smiled,
Then sported as before.

Sunk was her voice—'twas vain to fly—
'Twas vain to shriek to brave—
O Nature! it was vain to cry—
To prompt the means to save.

She tore her kerchief from her breast,
And hid her face a bare—
He saw, delighted, hid the brink,
And gazed to banquet there.

Great Railroad Speed.
A paper was lately read, says the Scientific American, by Judge Meigs, before the American Institute Farmers' Club, at New York, upon the subject of rapid railroad traveling, in which he said—
'I have, with others, admired the progress made in velocity on railroads, up to even one hundred miles an hour on straight rails, which has been done in England. But I entertain views of railroad velocity, far beyond any yet ventured to be expressed. The Emperor of Russia has taken the first great step towards what I deem to be the ultimatum of railroad travel.

Instead of cutting a narrow alley through the country, or going around everything in the way of a straight line—he has cut a broad way five hundred miles, from St. Petersburg to Moscow—he has made it all the way two hundred feet wide, so that the engineer can see everything that comes on the road.

Such is part of future, the railroad from point to point a mathematical line; the rails ten times stronger than any now used; the locomotives of a wheel of far greater diameter, say 12 or 15 feet; the gauge of a relative breadth; the signals and tins perfectly settled; the road, walled on both sides, during the transit of trains having the gates of the walls all closed. Then instead of one hundred miles an hour, we shall safely travel three hundred miles an hour! I will not pretend now to say more—one hundred seems far enough; so did twenty a few years ago; and now, on very straight rails, or some straight ones, we travel sixty miles an hour in this country, and in England one hundred miles an hour is accomplished.

Mathematical precision and time will solve this problem—a passage from New York to San Francisco in ten hours!

We have no doubt of one hundred miles an hour being a perfectly practicable railroad speed, by the building of such railroads as those described by the Judge, and this opinion we expressed in the columns of the Scientific American some years ago. But 300 miles an hour inclines us to the very side of the question. This speed would require a piston velocity of 3,000 feet per minute, or eighteen inches stroke, if the driving wheels were 24 feet in circumference—nearly 8 feet in diameter—whoppers—and they would have to make 1,100 revolutions per minute. A the wheel circumference of the engine is struck with such velocity, the means of raising the steam necessary to perform this feat, as the boiler would have to evaporate near a ton of water per minute—sixty in an hour. So far as it relates to the final velocity of steam in a vacuum, the speed of 300 miles an hour could be obtained, but how can such a quantity of steam be evaporated in a locomotive boiler, in this space of time? Judge Meigs may perhaps be able to answer us. With respect to the velocity of bodies, our ideas are bounded by what has been performed before our eyes—the flight of the swallow, the pigeon, the eagle; but when we look to the heavenly bodies, and calculate the awful velocity with which they are incessantly whirling through space, the mind is struck with a dumb awe at the mighty power of the great Creator, who has made the huge Jupiter to revolve once on his axis in ten hours, and the high voice at the rate of 435 miles an hour, or 15 times the velocity of a locomotive running at the rate of 300 miles an hour.

Scene from real Life.
We copy the following from the "Fredericton Daily Record," a journal devoted to the interests of the Mission established in the locality whose name it bears, by the Rev. Mr. Pease. The narrative illustrates the character of the work which Mr. Pease is doing there, for religion, for purity, and for temperance.

A few Sabbath since, at morning service, one of the most degraded specimens of humanity that ever greeted my vision, came staggering into the Chapel of the House of Industry. His wild and fringed locks, ragged and dirty beyond description, his face braided and swollen, rendered him an object of disgust and terror. He seemed to look at the children with wonderful interest, occasionally muttering to himself—'Beautiful! beautiful! O! that mine were here!' He sat an hour or more, and then with a long earnest look at the children, staggered out of the chapel, and went up to the dark valley of the shadow of death—Cow Bay.

As the bell rang for service in the afternoon, and while the children were clustering together, the same wild looking man staggered in once more. He surveyed the faces of the children with the closest scrutiny, and at length his eyes rested on two bright-eyed little girls. He sat immobile as a statue during the whole service, gazing intently on the faces of these two children.

The service closed, the congregation dispersed, yet he lingered, and the tears came coursing down his face, thick and fast.

"Dr. S—asked him, 'what was the matter?'"
'I am a drunkard! A wretch—an outcast, homeless, and without a penny. Once I had a home and friends—father, mother, wife, children and a host of friends who loved and respected me. Time passed on and I became a drunkard. One friend after another left me; still I drank on, and went down to their graves with broken hearts. My poor wife clung to me when all others deserted me. I still drank on, pawned one article after another, until all was gone, and when my wife refused to give me her wedding ring, which she had given to with the tenacity of a death grasp, I fell her to the earth, seized her finger, tore off the ring and pawned it for money. That fatal blow maddened her, and to despair, she, too, drank, and together we wandered to the gutter.

"Pensive as we begged our way from Vermont to the great city. Here we hired a small cottage, in a dark, dismal street, and sent our children out to beg. Many a weary day we spent in that dreary cellar, while our children were wandering in the streets begging for their drunken parents. About forty days since my little girls went out to beg, and from that hour to this I have not seen them. Without food or fire I clung to my dimly shining, but hunger-frenzied me, and, and I began to search for my children. My dear wife had been sent to Baccus Island, as a vagrant, and about I went to the Islands, and in despair I wandered to the Five Points, and for the last few days I have lived in Cow Bay, among beggars and thieves. Today I saw two children, who, if they had not looked so clean, and sung so sweetly, I would have called mine. O! would to God they were!"

"Tell me the name," said Dr. S., "and I will see." In a few moments two interesting little girls were led towards him. At the first sight of this fearful looking man, they shrieked back. The poor man sprang on his feet, exclaiming, "They are mine, mine! My children, don't you know your poor old father!—come to me, my children. Father I've—y-e-a, he won't hurt you. He reached out his arms; the little girls were timid at first, but they soon climbed upon their father's knee, while the tears were streaming down his face.

"Kiss your poor drunken father, my children!" But the face of the man was black and filthy, not a place could be found upon him that was not black, and he remembered their poor degraded father, and each embraced him, and the elder one, and with a voice that touched every heart, exclaiming, "They are mine, mine! My children, don't you know your poor old father!—come to me, my children. Father I've—y-e-a, he won't hurt you. He reached out his arms; the little girls were timid at first, but they soon climbed upon their father's knee, while the tears were streaming down his face.

WILLIAM GALPIN.
A WONDERFUL CURE OF A DANGEROUS SWELLING OF THE KNEE.
Copy of a Letter from John F. Kelly, an Agriculturalist residing in Newburgh, N. Y., dated May 15, 1850.
To Professor Holloway.
Sir—I was afflicted with a swelling on each side of the knee, about the size of a hen's egg, for nearly two years, which I treated with all the means of medicine, but without success. Her legs were swollen, and she was unable to walk. I was advised to try your Pills, and I did so, and in a few days the swelling was completely removed, and she is now perfectly well. I have no more to say, but I am, Sir, your obedient servant, J. F. KELLY.

A DREADED BAD BREAST CURED IN ONE MONTH.
Extract of a Letter from Mr. Frederick Turner, of Perth Amboy, N. J., dated Nov. 13, 1850.
To Professor Holloway.
Sir—My wife had suffered from Bad Breast for more than six months, and during the whole time she had been unable to do any work. I was advised to try your Pills, and I did so, and in a few days the swelling was completely removed, and she is now perfectly well. I have no more to say, but I am, Sir, your obedient servant, F. TURNER.

SHORT AND SENSIBLE.—An Illinois candidate for a seat in the legislature addressed the electors thus:—Pellow citizens, I am no speech-maker; but what I say, I'll do. I've lived among you twenty years. If I've shown myself a clever fellow, you know it without a speech. If I'm not a clever fellow, you know that too, and wouldn't forget it with a speech. I'm a candidate for the legislature.—If you think I'm a good man, vote for me; if you think I'm a bad man, vote for him. The fact is, either of us will make a good representative. The electors placed the model of a man at the head of the poll, and so far as he himself was considered, gave him an opportunity of making good his closing words.

Dat ish all right.
A German shemsker, who was from home on the day of the fire, on returning the next day, says the Newark N. J. Advertiser, procured a long ladder, and ascended to the top of the chimney, which was tottering and ready to fall. While the crowd was looking on with amazement, he drew from a crevice in the chimney an old dinner-pot, which contained over eight hundred dollars in gold and silver. On descending, he exclaimed: "Dat ish all right," and left.

FROM THE CHRISTIAN VISITOR.
MARINE LYCOM.
DEAR BROTHER LYCOM.
As many of your readers are interested in the elevation of the Sailor, it will afford them pleasure to know that our Temperance efforts at the Marine Hall are being crowned with success.

In addition to those Wednesday evening gatherings, which are crowded and entertained with most instructive and thrilling addresses, we have resolved on opening a MARINE LYCOM. The clergy of the city have very generally responded to an invitation to deliver each his lecture, aside from other popular speakers. This arrangement is fraught with good, inasmuch as it provides an instructive entertainment for those who have hitherto been strangers to such things, and the pecuniary benefit will aid the S. M. Friend Society. The first lecture of the course will be delivered by Mr. H. P. Pease, Esq., on Friday the 29th inst., at 8 o'clock P. M.

THE Consts and Harbours of New Brunswick in the Bay of Fundy and Gulf of St. Lawrence.
This lecture alone will be worth double the price of the whole course. It has never been delivered and it will be illustrated by a Map of the whole.

ED The remaining tickets may be found at any of the B. & S. Stores in Prince William street, at the low price of five shillings, each ticket admitting two persons.

E. N. HARRIS, Secretary.
St. John, Dec. 7, 1854.

HOLLOWAY'S OINTMENT
A PERSONS HEAD OF AGE, OR FOR A BAD LEG, OF THIRTY YEARS STANDING.
Copy of a Letter from Mr. William Gibbs, of 70, St. Mark's Street, Liverpool, dated May 13th, 1851.
To Professor Holloway.
Sir—I suffered for a period of thirty years from a bad leg, the result of two or three different accidents. I was a companion to sea-faring voyagers. I had to go to sea in a vessel of war, and was exposed to all the hardships of a soldier's life. I was once in opposition to that opinion, your Pills and Ointment effected a complete cure in a very short time, that I have not to this day.

(Signed) WILLIAM GIBBS.
The truth of this statement can be verified by Mr. W. H. England, Queen's Street, Liverpool, who has known me for many years.

A MOST MIRACULOUS CURE OF BAD LEGS, AFTER 43 YEARS SUFFERING.
Extract of a Letter from Mr. William Gibbs, of 70, St. Mark's Street, Liverpool, dated May 13th, 1851.
To Professor Holloway.
Sir—At the age of 13 years I was afflicted with a bad leg, which was the result of a fall from a horse. I was a companion to sea-faring voyagers. I had to go to sea in a vessel of war, and was exposed to all the hardships of a soldier's life. I was once in opposition to that opinion, your Pills and Ointment effected a complete cure in a very short time, that I have not to this day.

HOLLOWAY'S PILLS.
CURE OF A DISORDERED LIVER AND BAD DIGESTION.
Copy of a Letter from Mr. R. W. Kirkus, of 12, Princes Street, Liverpool, dated 6th Dec. 1851.
To Professor Holloway.
Sir—Your Pills and Ointment have stood the highest test of a long and successful career. I have been afflicted for many years with a disordered liver, and bad digestion. I was once in opposition to that opinion, your Pills and Ointment effected a complete cure in a very short time, that I have not to this day.
