

## JENCKES' AIR COMPRESSORS

are built to successfully stand severe and continuous service, and the great number now in use throughout the Dominion are sufficient evidence of this durability.

The type illustrated is two-stage, duplex belt-driven, known as our class DB-2.

It has Corliss Inlet valves, disc outlet valves, enclosed and dustproof frame, minimizing wear. It is compact, yet accessible at every point. Lubrication system is of the splash gravity type and the bearings are extra large. Built in all sizes from 500 feet upwards.

We build a complete line of air compressing machinery, including all the regular types, single and multiple stage, belt, steam or electric driven, up to and including Cross Compound Corliss steam-driven machines for large installations.

Jenckes' Class DB-2 Air Compressor
