EAST MIDDLESEX TORY SUPPORTERS HONOR S. F. GLASS

Convey Appreciation to Veteran Campaigner For Services to Party.

OFFICERS ELECTED

of his party including several not-able years in the House of Commons S. Frank Glass, ex-M.P., was highly nonored at the annual session of the East Middlesex Conservative Association here Saturday afternoon.

Following the business session of the afternoon a special committee was detailed to convey to the veteran Tory campaigner the members' resolution of the high esteem in which he is still held among them and throughout the riding generally. Still recuperating from a recent illness, Mr. Glass was unable to be in attendance. Through a communication to the secretary, however, he conveyed his deep appreciation of their mark of tribute.

All officers were re-elected with-out opposition, J. L. Robson of London Township retaining the presidency for another term while Homer B. Neeley was again elected to the post of secretary.

water hearkened patiently to the voice of their leaders who vouchsafed the general intelligence that the people of this country were merely waiting for the coming of merely waiting for the the Conservatives to Ottawa.

Donald Sutherland was imported all the way from the south riding of Oxford to engender additional "pep"

He did make it quite clear, however,

MORE FACTS

REGARDING FARM IMPLEMENTS

No. 2 of a Series

Factors That Control Implement Prices

THE four principal factors determining to workers in the implement factories alone, but in the steel mills, the mines, the forests tion, and Volume of Production.

Over none of these has the manufacturer Transportation

any actual control. In 1913 the farm implement industry after three-quarters of a century of progress and development, due to improved methods of production, had become established on a sound basis. Every superfluous item of cost had been extracted, and machines were being turned out in mass production at minimum

Then came the war. Everything began to increase in cost until, by 1921 unprecedented levels were reached. The manufacturer's raw materials increased 175%, labor 153%, and transportation 44% to 100%, while production decreased about 50%. Implements, however, only advanced 103%, whereas wheat, the principal farm product had reached its peak cf 263% two years earlier in 1919.

Consider now the advance made by some of the most important materials used in implement manufacture. Malleable iron castings cost 100% more than in 1914, steel 128%, cotton duck 169%, coke 125% and lumber from 113% to 248%. Yet implements are only 80.4% higher than before the war.

Labor

The farmer knows the effect that the high cost of labor has on his production cost and can appreciate how it likewise affects the implement maker. Approximately 80% of all money received by the manufacturer from the and decreased production - and has been farmer for machines is paid for labor - not dealt a serious blow. Yet-

the ultimate price of farm implements are, Raw Materials, Labor, Transporta- and the railroads. Labor at present is 113% greater than before the war.

Increased freight on incoming materials increased 90% since 1914. In addition freight is prepaid on implements to the customer's station, a fact not always taken into consideration in price comparison. These charges on the out-going product have increased from 44 to 100%. It costs \$33.45 to ship an 8-foot Binder from the factory to Calgary, 2,065 miles, while to London, England, the charge on the same implement is only \$19.72, although the distance is 3,810 miles. To Havre, France, 3,671 miles distance, the cost is only \$17.82, and to Melbourne, Australia, about 11,000 miles from Toronto, the charge is \$23.52,

Volume of Production

Volume of production depends upon demand and volume is the key to lower costs and lower prices. When production rises by leaps and bounds, (as, for instance, in the automobile industry), the costs come down. When demand and production fall (as in the farm implement industry), costs go up. The following figures taken for the U.S., but which are relatively applicable to Canada as well, will explain this more clearly.

Automobile Production
1914 543,679 cars
1922 2,406,396 " Implement Production
4,119,537 machines
1,206,059 "

Inc. 1,862,717 or 343% Dec. 2,913,478 or 71% The difficult position of the Implement industry will be readily understood. It has been caught between two forces-rising costs
