In terms of processor technology, the installed base of PCs is migrating away from both the 808X and the 80286, mainly to the 80386 platform. We do not see the 80486 platform as a significant player before year-end 1993. The split per platform at year-end 1991 and 1992 will be:

	Year-end 1991	Year-end 1992
Intel 808X	12 %	10 %
Intel 80286	41 %	36 %
Intel 80386	45 %	51 %
Intel 80486	1 %	2 %
680X0	1 %	1 %
