A. O. CRAWFORD, S. Weymouth, Mass.

HUTCHINSON

ROGERSVILLE, GENESEE, CO., MICH.

DESIRES to briefly outline the contents of his little

THE PRODUCTION OF COMB HONEY."

The PRODUCTION OF CUMD HUNDIA.

The "Introduction" gives a concise sketch of the plains how the book came to be written. The first the advantages of cellar-wintering combined with spring the protection.

Aside from food in abundance, warmth is ice," The cheapest and best method of securing this is names his factor of the protection.

The cheapest and best method of securing this is names his favorite surplus case, and gives reasons for the protection. Step in detail. Under the head of "Supers" the address his favorite surplus case, and gives reasons for the

The next topic is that of "Separators." Their advantaken next topic is that of "Separators." Incu accepted and disadvantages; the conditions under which they makeded and the methods necessary to their abandonlages and disadvantages; the conditions under which they mean and disadvantages; the conditions under which they mean are briefly told. Then "Sections" are taken up; the time for adqualities of the different kinds mentioned; the time for putting them on given and the advantages of fully explained with comb, especially in the spring T. explained

The next three pages are devoted to "Tiering-Up," in ed, showing the page with which it enables a bee-keeper to low it has a second to be a second to be a showing the page with which it enables a bee-keeper to low: "Hiving which there pages are devoted to the devoted to the devoted to show; a reparations of this system are explicitly describ-shanding the ease with which it enables a bee-keeper shandle a "noney-shower." Then follow: "Hiving fally dispensing with full sheets of foundation in the authorough instructions given for its accomplishment. orood, dispensing with full sheets of four analysis when hiving swarms is made perfectly clear, between the hiving swarms is made perfectly clear, between the hiving swarms is made perfectly clear, but the swarms of the constructions given for its accomplishment. With starters attuibling-block in the road to success the swarms only, hence six pages are given up to this way to the way to prevent its construction made plain. The next two bases prevent its construction made plain. bublect. Why bees build it, is well considered, and the bages are given up. The next two bages are event its construction made plain. The next two bages are used in answering the question, "What shall be beed in the sections." That is, when shall foundation be build the combs, and when shall the bees be allowed to the combs, under the head of "Secretion and the sections." It is the combs are given and suggestions. The Combs. Illustrations are given and suggestions.

The Conclusion requests "the freest of criticism," and on the Conclusion requests "the freest of criticism," and large a scale at first.

THE D. A. JONES CO., LD., Beeton.

MYERS 1887 CIRCULAR OF

BEE-KEEPERS

BEES, QUEENS, FOUNDATIONS, &c..

Free to all. We would call special attention to Smokers as manufactured by us, we guarantee every one. The barrel is made of iron, the nozzel is tin and so arran ed that embers cannot be blown among the bees, the sliding door at the rear of the barrel together with the strip of sandpaper on the bellows, enables us to light the smoker almost instantly with a match. The bellows is so constructed that fire cannot get into it, the spring is on the outside and can very easily be replaced if broken without injuring the bellows. We also manufacture the "Clark cold blast smoker" the same as made by A. I. Root, of Medina, Ohio. Price of smoker with 3 inch barrel \$1.00, 2h barrel 75 cents Clarks cold blast 50 cents, by mail each 30 cents extra. For wholesale rates send for Illustrated Catalogue to
