

Grading and Ditching

**Here is a machine that handles BOTH
with the utmost economy and efficiency**

The Keystone Excavator Model 4 has been specially designed to handle, with different equipment on the one machine, practically every earth moving problem that confronts the Canadian municipality. Its capacity up to 400 cubic yards per day, with a crew of three men strikes the last note in real efficiency and economy.

KEYSTONE EXCAVATOR MODEL 4

With the one Keystone Excavator you can use either a Skimmer Scoop for road work, a Ditcher Scoop for ditch or excavation digging, a Dipper Scoop for side hill work or a clam-shell bucket. All are readily interchangeable. The Keystone travels under its own power, has 32 h.p. steam engine for work, weighs only 12 tons, so it does not injure street pavements or bridges, but has power to tackle 95% of all the excavation work possible.

The Keystone Excavator is built entirely in Canada and is sold at a most attractive price. Let us send you illustrated booklet and full particulars.

A "tough" ditching job in Oshawa performed with entire satisfaction by the Keystone.

Keeping the dump wagons moving in a Toronto grading job with the Keystone.
