### POOR DOCUMENT

THE EVENING TIMES AND STAR, ST. JOHN, N. B., FRIDAY, JANUARY 13, 1922

of the meeting was to convince the city

the power. The hardware clerks had

brought the matter to this point and they now wanted a larger body to take

they how wanted a larger to up.

Mr. Agar said that the matter should not be allowed to rest on the hardware clerks. Those present should make a fight for the citizens' interests and should go ahead and act.

Mr. Flood said what was needed was publicity. The commission offered the pover in Fairville at \$118,000. If the company distributed it, it would cost \$500,000 additional to get the power into the homes.

the homes.

G. Fred. Fisher expressed appreciation of the way in which Mr. Phillips had presented the subject and also congratulated the hardware clerks on what they had accomplished so far. The meeting would pass a resolution urging the city and distribute the power and distribute

council to take the power and distribute

WILL FIGHT FOR

CIVIC OWNERSHIP

At a meeting of representative citizens, held last evening at the Board of Trade rooms, under the auspices of the Hardware Clerks' Association, the Municipal Association was formed, the object of which is to impress upon the city council to take the power and distribute it themselves, Mr. Fillips said that it was time that something was done. The facts had Toronto had entered into competitive the proper time to the lighting rate down from the lighting rate down from the lighting rate down from conclusion, he said that an organization should be formed, the object of which is to impress upon the city council to take the power and distribute it themselves, Mr. Fillips asserted. He told how the people of Hamilton and Toronto had entered into competitive the proper time to down from the lighting rate down from the said that, on the bare statement of 2.3 cents per k.w.h. in Hamilton, and from 8 cents to 2.7 cents in Toronto. In conclusion, he said that an organization should be formed to distribute power. He said that the seven the lighting rate down from the lighting rate down

An Important Question.

Mr. Agar, on taking the chair, said that the question was one of great importance to St. John and should receive the careful attention of the taxpayers. Unless the city had cheap power it would be a difficult matter to develop injustic to their full account.

The report showed that the total cost of the power side of the company's business, that is, power house and distribution system, had been \$1,025,000. That was not, however, the present day value it cost the company 1.787 per k. w. hour to produce electricity from steam.

Mr. Kensit said that a steam stand-by week to be maintained. The speaker and and practically two different west two power dams, two storage dams, two penstocks and three generators in the power house. It was not at all probable that both would go out of commission at the same nime. If Mr. Kensit had looked into this end of it, the speaker said, he would not have said that it would be necessary to maintain a steam stand-by. Sup-

This amount compares with \$569,085 paid the company last year for the same thing. It would mean an annual saving of \$300,000 to the consumers of St. John. In London (Ont.), the operating expenses yearly amounted to \$109,000, and

would be a dimensi matter to develop injustries to their full capacity. He complimented the hardware clerks on their public spirit and hoped that their efforts would prove profitable to the whole community.

Need For Cheaper Power.

The chairman then called on Mr. Phillips, who said that the importance of the power sent over the wires. It also sold one-third of the power remeant the representated Cheap power meant the regretates material comfort and benefit, as well as an advance in the ndustrial life of the community. Using yould not be over-estimated Cheap powers when used. The using of natural resources which were lost forever when used. The using of matural resources which were lost forever when used. The using of water power meant that they were not using ap any of the natural resources. Even at the same price, it was better to use yower from water than that from coal.

Mr. Phillips then explained the water yower from water than that from coal.

Mr. Phillips that the power at four cents per k.w.h.

Cost of Distribution System.

In reply to the opinion that the company was the report to obtain a system. In reply to the opinion that the company would not sell out and the question as to what it would cost to build a system, Mr. Phillips said that various as the area of the power stimates had been made as to the cost.

Mr. Foss had made a rough estimate of \$750,000, and it was to be remembered that with a new and modern plant the city would make a much better showing. Mr. Ross had said that it would be a power with that they were not using your power when used. The using of water yower when used. The using of water yower

### The Worlds' Steeplechase Champion

Mr. Percy Hodge, says:-"As the 'World's Steeplechase Champion,' I can quite easily maintain my supremacy by including a regular course of Phosferine throughout the training periods and also for a short time after the races in which I compete. I am sure that the 'fit and fresh' feeling, and the sense of physical energy which enabled me to cover 1 mile, including 33 jumps, under 5 minutes was really THAT 'FIT AND FRESH' FEELING

promoted by the Phosterine I took immediately before the race. There is always a risk of 'nerviness' upsetting the best form or condition, and in all my experience there is nothing to surpass Phosferine to enable an athlete to cope with any such disadvantage."—Park Lodge, Park Rd., Twickenham, London, England.

that would bring the cost up to \$450,000. It was certain that the company would not sell its system for what it was worth unless convinced that the city was going WILCOXS to build a system.

John N. Flood said that nothing had yet been done about the city taking over the power. The city, he thought, should take over the power and then find a market for it.

H. D. Sullivan said that the real idea

# January Clearance SALE

### WORTHY OF YOUR ATTENTION

Never in the past seven years have we offered to the public such wonderful bargains in clothing for men, women and children, and for no other reason, only that these goods must be sold, as we carry no clothing o'v. pose a steam stand-by was needed, it would cost \$64,000 a year or half a cent per k. w. h.

Equal to 100,000 Tons of Coal.

The speaker said that it would take 100,000 tons of coal a year to produce the power that would be generated at Musquash.

Mr. Kensit said that the company was capitalized too high and that the dis
Mr. Sallivan moved, seconded by Alexander Corbet, that the meeting resolve itself into a municipal association, the object of which would be to impress on the city counch the necessary on the city council build a distribution system and deliver power at four cents per k.w.h.

Mr. Sallivan moved, seconded by Alexander Corbet, that the meeting resolve itself into a municipal association, the object of which would be to impress on the city council build a distribute it.

At this stage, Mr. Agar, as chairman, thanked Mr. Phillips for his splendid address.

Mr. Separate said that the company was capitalized too high and that the dis-

Cherry Balsam

Mrs. White, a Kings county woman, writes as follows: "I caught a bad cold while driving in the sleet one evening and sitting in church in my wet clothes. The cold persisted for some months and my husband, fearing that it might
lead to something more serious, induced me to try a bottle of
your Hawker's Tolu and Cherry Balsam. I am glad to say
the cold was completely cared."
