Choose Good Stanchions

What's YOUR idea of a GOOD Stanchion?
Isn't it one that will never bulge or sag, one that will last you a lifetime, one that will lock and unlock as easily a year from now or ten years from now as on the day you bought it—and one that holds the cattle surely?

The O. K. Canadian Stanchion comes up to all these requirements—because we've been making Stanchions so long that we're on to every wrinkle in the business and we know just how to make every part best and what to make it of.

Frames of the best U-bar or channel-section steel—so strong and rigid that they simply can't bulge or bend.

Spring bars hinged high instead of at the bottom—so they will always be easy to lock and unlock—and fixed so that they cannot fall to the floor when open, to be trod on and bent.

A lock that's so simple that it can't get out of order in years of use, easy to work, and proof against the "alicious" cow.

The arched post design of O.K. Canadian Stalls prevents the cattle's walking through into the feed trough or pulling feed back into the stall and still leaves plenty of room at the top for operating the Stanchion, without sacrificing strength or increasing the cost. Our patented clamp makes the work of setting up "O.K. Canadian" equipments simpler and quicker than any other.

We have a couple of booklets that are chock-full of interesting points for dairy-men and they'll show you how to figure just what an "O.K. Canadian" equipment will cost for your barn whether you want just the Stanchions or whether you want to put in complete metal stalls. They're yours if you look for them. Department A

Wagons and I H C Wagons

THE farmer who, in need of a wagon, blindly makes a bee line for the first new wagon or dealer in sight may get a good wagon. If chance steers him to an I H C dealer, well and good. That is his good fortune. If not, he will probably be in the wagon market again years before he should be. But the economical farmer will study and compare different makes; find out in advance which wagon will give him best service; and consider such questions as company standing and reputation. When he has finished, the evidence will lead him to buy an I H C wagon.

Petrolia Chatham

Here are only two of the many features that contribute to the making of I H C wagon reputation. 1—Air-drying of lumber. Every stick of wood used—hickory and oak for wheels and axles, bay poplar for box sides, long leaf yellow pine for bottoms—lies drying in open sheds from two to three years, saving all its resinous saps, toughening, seasoning, gaining elasticity, as only air-dried lumber does. Kiln-drying, the terrific application of unnatural heat for a few days, evaporates the sap, leaves the wood inelastic, brittle, and weak—ruins it, in short. 2—Thorough inspections. Every I H C wagon, before it is ready for the farmer, has had to pass many rigid inspections by experts. Seldom does any flaw in material, or defect in shaping, ironing, and assembling, get by without detection. Every I H C wagon that leaves the factory has had to come up to I H C standards first. Look the line over at the local agent's. Get catalogues, too, from the agent, or, write the
