THE MAYER CO., Limited, WINNIPEG B

EVERY farmer knows that
his cows yield more milk and better milk when they are contented. Are your cows contented? Are they profitable? If not, make them so by doing away with your old-time wooden stalls. They gather dirt, harbour disease germs, and prevent the free circulation of life-giving air and sunlight.

LOUDEN
Perfect Barn Equipments

The **LOUDEN** Tubular Steel Stable Equipment is easily and quickly installed and insures cleanliness and ventilation. Its use means comfort for your cows and profits for you.

PUREBREDS vs. MONGRELS

There are a great many farmers who have an idea that because they do not keep fowls for any other purpose than for their own use, it is not necessary for them to keep anything but mongrels. Most of these people have been so long accustomed to believe that almost anything will answer for themselves that they fail to appreciate what they deserve. It may be all right for them to think they do not need as good as the land affords, but let some other fellow tell them so and see how quickly they will resent it.

There are many reasons why purebred fowls are to be preferred to mongrel or scrub stock, and as the "best is none too good" it is to the farmer's interest to acquaint himself with the comparative qualities of the more desirable breeds, and when convinced of one greater excellence of purebred poultry, dispose of the present flock of scrubs, and replace them with some particular breed or variety of fowls that is thought to be most suitable for the farm.

In farming, as in every other business, the greatest possible profit is the object that stimulates to never tiring efforts and as farm poultry, with proper care and management, are more profitable than any other thing on the farm, considering the amount invested, they should receive at the least their share of consideration and attention. The best breed for the farmer is some general purpose fowl or any good breed to which he takes a liking. A good strain of purebred fowls will be far more profitable as layers than the usual flock of mongrels; are incomparably more desirable for market purposes than the small bantam-bodied mixed birds; are more tame and docile to handle and manage, and the last, but not least favorable quality, is their beauty. How much more to be admired is a flock, every specimen of which is of the same form and color, than one where the birds are of every color and more like quail than fowls.

One would hardly believe that persons, who appear intelligent in most matters pertaining to the farm and farming, would have such erroneous and often absurd impressions and ideas of purebred fowls and their usefulness or rather worthfulness, on the farm, unless convinced of it by personal conversation or observations. Persons will argue that mongrel hens were very much superior layers than purebred hens; that purebreds are not so vigorous, more subject to diseases, and a greater per cent. of them die in a year than the poultry that boasted no "blue blood" or aristocratic breeding, and also that purebred fowls require much more care and attention than mongrels and were difficult to raise to maturity.

Such statements as those cited are made thru lack of experience with purebreds and therefore thru absolute ignorance of their excellent qualities and characteristics. The great profit realized from the more prolific purebreds, the eggs, so much larger in size and so many more in number, their large, plump carcasses when dressed ready for the market, should all combine to persuade any one of common sense to choose them in preference to a flock of mongrels. As to the vigor and healthfulness of the purebreds, there is no reason why these should be less hardy than scrub stock. Then, too, from a flock of purebreds, by expending a small sum each year in advertising, one can readily dispose of all surplus cockerels at a premium for breeding purposes and during the hatching season realize from \$1 to \$5 per setting for all eggs.

As to requiring more care and attention than mongrels, this is another mistaken idea. It will be admitted that if sadly neglected and left to scratch for a living and allowed to remain without house or house thru rain and storm alike, as are so many farm flocks, very little profit can be realized from a flock of purebreds, even if it be of the most noted laying strain.

It is possible for every breeder to have a flock that will in their beauty and profitableness be the admiration of all beholders. So why be satisfied with inferior, unprofitable poultry when the superior and profitable ones are easily obtained? If you keep fowls and do not keep purebreds, change your policy and you will see for yourself that the well bred birds are much more preferable than mongrels.

Golden West Balgreggan

Clydesdales, Shorthorns (both Beef and Dual Purpose) Welsh Ponies and Shropshire Sheep

Western Corrugated Culvert Co. Ltd., Saskatoon, Can.**Grind Your Grain with a "Superior Feed Mill"**

As its name implies, the "Superior" surpasses all other makes in construction, design, capacity, appearance and quality of grinding done. The "Superior" is equipped with a 6-inch pulley, and is built throughout of steel and iron. It is especially designed for small Gasoline Engines, Wind Mill or Tread Mill power. Note the long babbitted bearings, the large hopper capacity, the shake feed, which is particularly desirable when used with Gasoline Engines and Wind Mills. It is also provided with Safety Springs to protect burrs from nails or other hard substances and to keep burrs apart when mill is being run empty. The screw for adjusting burrs together with the number of burrs that we can supply enables you to grind your feed to any degree of fineness. No grain wasted, as the design of stand makes it easy to sweep up all feed that accumulates around it. Being fitted with 6-inch burrs the grinding is done with greater economy, since work is accomplished closer to the shaft. Consequently less power is needed. All that is necessary to obtain twice the amount of chop is to double the speed.

PRICES CASH WITH ORDER

No. 1 Superior Feed Mill, complete with two sets of burrs, approximate weight, 125 lbs., capacity, 7 to 20 bu. per hour. Requires 2 1/2 to 4 H.P. \$16.00
No. 2 Superior Feed Mill, complete with two sets of burrs, approximate weight, 200 lbs., capacity, 10 to 30 bu. per hour. Requires 3 1/2 to 6 H.P. \$21.60
