A YEN HOME TREATMENT FOR THE CURP OF CATARRIL, CATARRIIAL DESPNESS AND HAY PRYEE.

The inicroscope has proved that these dlseases are contagious, and that they are due to the presence of living parasites in the lining membrane of the upper air passages and eus tachien tubes. The eminent scientists, Tyn dall, Huxley and Beale endorse this, and these authorities cannot be disputed. The regular method of treating these diseases is to apply an irritant remedy weekly and even daily, thus keeping the delicate membrane in a constant state of irritation, accompanied by violent sneezing, allowing it no chance to heal, and as a natural consequence of such treatment not one permanent cure has ever been recorded. It is an absolute fact that these discuses cannot he cured by any application made oftener than once in two weeks, for the membrane must get a chance to heat before any application is repeated. It is now seven years since Mr. Dixon discovered the parasite in catarih and formulated his new treatment, and since then his remedy has become a household word in every country where the English language is apoken. Cures effected by him seven years in the country which has real orders is ago are cures still, there having been no return of the Church of the Roman obedience.

So highly are these remedies valued, and so

great is the demand for them, that ignorant imitators have started up everywhere, pretending to destroy a parasite, of which they no nothing, by remedies the results of the appli-cation of which they are equally ignorant. ministers of the old school.
