CATARRIL

A NEW HOME TREATMENT FOR THE CURE OF CATARRII, CATARRIIAL DEAFNESS AND HAY FRYER.
The microscope has proved that these di-

the microscope has proven that these diseases are contagious, and that they are due to the presence of living parasites in the lining membrane of the upper air passages and custachian tubes. The eminent scientists, Tyndall, Huxley and Beale endorse this, and these authorities cannot be disputed. The regular method of treating these diseases is to apply an irritant remedy weekly and even daily, thus keeping the delicate membrane in a constant state of irritation, accompanied by violent sneezing, allowing it no chance to heal, and as a natural consequence of such treatment not one permanent cute has ever been recorded. It is an absolute fact that these diseases cannot be cured by any application made oftener than once in two weeks, for the membrane must get a chance to heal before any application is repeated. It is now seven years since Mr. Dixon discovered the parasite in catarrh and formulated his new treatment, and since then his remedy has become a household word in every country where the English language is spoken. Cures effected by him seven years ago are cures still, there having been no return of the disease.

So highly are these remedies valued, and so great is the demand for them, that ignorant imitators have started in everywhere.

imitators have started up everywhere, pretend-ing to destroy a parasite, of which they no nothing, by remedies the results of the appli-cation of which they are equally ignorant. Mr. Dixon's remedy is applied only once in two weeks, and from one to three applications effect a permanent cure in the most aggravated cases. N.B.—For catarrhal troubles peculiar to females (whites) this remedy is a specific.

Mr. Dixon sends a pamphlet describing his new treatment on the receipt of ten cents in stamps. The address is A. H. Dixon & Son, 303 King Street West, Toronto, Canada.— Scientific American.
