

An EDP Security inspection program is continually applied on departmental premises in Canada. This involves manual inspection by personnel of the Security Division and security-cleared members of the Canadian Corps of Commissionaires, and, automated infraction detection methods in COSICS and other departmental computer systems. The EDP Security Section (ISSC) and ISSG jointly monitor and assess EDP security infractions.

Security Infractions are taken very seriously and are monitored by ISSG. All violations are reported to the employee's immediate supervisor and Director and may result in counselling by senior management or revocation of security clearance.
