NOVEMBER.—About barns, should they be tight or open? There are differences of opinion. Some say the hay keeps better when the barn is open and airy. These say that the air circulating freely prevents the hay from heating and spoiling. Others say the hay will be sweeter and fresher if the building is kept quite tight, and all wind excluded. As to the comfort of animals there can be no dispute. They must suffer from loosely-jointed buildings called barns. We do not believe in allowing wide cracks or open joints even where hay is to be stowed, and should prefer to have hay stored in a tight place. But we would give the hay proper ventilation, and we believe that no barn should be built for storing hay or keeping cattle without such an arrangement as gives good ventilation.
