

RESOURCES OF THE GREAT NORTH LAND

Jas. H. Cornwall Addresses Canadian Club in Calgary, Telling the Ultimate Possibilities of the Mackenzie and Peace River Countries. Address is Heard by Interested Audience.

Calgary, Nov. 4.—At the Canadian luncheon yesterday Mr. J. H. Cornwall, of Lesser Slave Lake, delivered a very interesting and instructive address on the great north land, which was greatly appreciated by the members present.

Mr. Cornwall has during the past few years made a special study of the resources and possibilities of the country along the Peace and Mackenzie rivers and spoke from a thorough knowledge of the country.

His address cannot fail to have the effect of directing attention upon the great country that lies in the northern portion of the province of Alberta and to the vast extent of territory that lies to the north of the province.

Mr. Cornwall illustrated his address by a map of the country which he described and the description was followed with interest by every one present.

The following is a brief outline of his speech:

Boundaries of North Land. The north land proper comprises all that portion of the country drained by the Mackenzie water shed, which flows east and north into the Arctic Ocean.

The Mackenzie water shed is made up as follows:—

In most southern feeder is the Athabasca river, which has its source in the Yellowhead Pass, and puts into the Athabasca lake. In its 1100 miles of length many rivers drain an immense area of country and empty their waters into this lake. Lake Athabasca is a lake about the same area as Lake Winnipeg, with but 2 feet difference in the sea level. Out of Lake Athabasca the Rock river is the source.

Forty miles on its way it is joined by the Peace river, a tremendous river which has its source in the Cassiar and Omineca countries in the heart of the Rockies 1500 miles to the west. This river drains a country as large as the province of Manitoba.

At the junction of the Rock and Peace rivers both lose their names and are known as the Great Slave river, which flows into the Great Slave lake after a northerly course of 300 miles.

As Large as Lake Superior. Great Slave lake in this sense about same area as Lake Superior. Out of this lake, at its western end, the Mackenzie river has its source. This river is named after Alexander Mackenzie, a trader and explorer of the old north west country. He discovered it in 1792. It is the eighth largest river in the known world. It puts into the Arctic Ocean in latitude 70.

This water sheds an area of 1,100,000 square miles than is drained by the great lakes and the St. Lawrence. It is the second water shed in North America, ranking next to that father of waters the Mississippi. This is a point of view that is known as the North Land.

As to the physical features of the country drained by this water shed, the mountains and the natural resources of the country, I will endeavor to give you some little information. The first thing that at my disposal makes it impossible for me to go into a thorough and extensive description.

Not Unlike Southern Alberta. The North Land contains in part land similar to southern Alberta. It differs only in having many natural resources that are unknown in the southern part of the province. It has timber, silver, gold and gypsum and some of these resources in great quantities.

Its timber wealth is of very great importance in view of the very limited amount of timber available in the prairie provinces. Timber, in all countries, as a subject, is taking up more economical thought than any other subject pertaining to the world's natural resources. Dr. Judson Clark, speaking before the Canadian club in Guelph, Ont., last night, said that at the present moment the limit of the consumption of timber for commercial purposes had been reached in proportion to the demand and that the price must now advance, prohibiting its use to a large extent. Dr. Clark is head of the forestry department in British Columbia, was formerly in a similar office in Ontario, and is recognized as one of the best informed authorities on standing timber in Canada.

The president of the United States has appointed Mr. Gannett, the best authority on standing timber in the United States, to take an actual census of all the timber in the United States with a view to finding out how long it will last and the best means to adopt to provide a continuous crop.

Valuable Timber Is Here. Practically all the timber of any commercial value between the Great Lakes and the Rocky mountains, is in the northern water sheds. It is not dense in any particular portion of the country, but is scattered over a wide area. On account of the magnificent water-ways and rivers it makes it very gettable and of the highest commercial value to the prairie provinces. When we consider the members of the fur trade in the world today, the timber wealth of the north country is one of the highest importance to the further development of the prairie section of the province.

Lake Winnipeg has produced millions of dollars worth of fish of the finest quality. We have in the North Land lakes that are larger and deeper and capable of producing enough fish to supply all the needs of the west. Canada is found in abundance. Salt of the finest quality is produced in the north. The fur traders gather annually at the salt springs, sufficient salt to supply all their trading posts right through to the Arctic Ocean. The Indians made their salt water, and far-sighted people are beginning to appreciate the value of the salt water. Salt of the finest quality is produced in the north. The fur traders gather annually at the salt springs, sufficient salt to supply all their trading posts right through to the Arctic Ocean. The Indians made their salt water, and far-sighted people are beginning to appreciate the value of the salt water.

Penny-a-word Cable. Canadian Government Has Made No Proposal Concerning Rates.

Canadian Press. London, Nov. 4.—In the House of Commons today Buxton stated that no proposal had been made by the Canadian government for a reduction in the cable rates. Ambassador Reed, of the United States, speaking at a banquet, wished success to the penny-a-word cable movement.

Change in Railway Unions. Moncton, N.B., Nov. 4.—The International Brotherhood of Railway Employees on the F. C. R., is no more, but the Canadian Brotherhood of Railway Employees has taken its place, and although the members of the former order are now members of the latter, it is practically a new organization. A. R. Mosher, of Halifax, is now grand president, and M. M. McLean, of Halifax, grand secretary-treasurer.

Temporary Reprieve. Chicago, Nov. 4.—Herman Billick, charged with the murder of the Vernal family, secured another temporary reprieve this afternoon, when Judge Burns continued until November 17 a motion for a new trial.

Two Divorce Decrees. Fredericton, Nov. 4.—In the divorce court today Judge Gregory granted two absolute divorces, one to W. Van derbeck, of Lorne, Victoria county, and another to the defendant, Mrs. Van derbeck, who was residing in Lorne. Madeline and Julius Whitlock of St.

Lawyer Goes to U.S. Churchman, Proven Dishonest, Made Example of by New York Judge.

New York, Nov. 4.—William Fleitner, a lawyer, with offices in Wall street, was sentenced today to one year imprisonment in the penitentiary for grand larceny. Fleitner is 66 years old and has been prominent as a churchman and a fundraiser for the cause of the poor. He was arrested after a search of his papers by two women for safe investments.

Eyes Turned to North Country. Three Great Railways Are Securing Information—G. T. P. Men Return From Trip North.

That railway directors and capitalists in the United States and England are becoming deeply interested in the vast area of undeveloped country north and west of Edmonton is evidenced by the large numbers of prospecting parties that have been travelling through the country getting first hand knowledge of the existing conditions. The C. P. R., the C. N. R. and the G. T. P. all have their eyes on this northern country and before long active steps will be taken to build a line of railway into this country and thus help to develop the mineral and timber resources and agricultural possibilities.

Latest reports from the north indicate that the Grand Trunk Pacific railway company are regarding this north country with increased interest and it is possible, are already making plans to build a line from Edmonton through the Pine River Pass and out to the Pacific coast through northern British Columbia. The railway company are already making plans to build a line from Edmonton through the Pine River Pass and out to the Pacific coast through northern British Columbia. The railway company are already making plans to build a line from Edmonton through the Pine River Pass and out to the Pacific coast through northern British Columbia.

RESOURCES OF THE GREAT NORTH LAND

Jas. H. Cornwall Addresses Canadian Club in Calgary, Telling the Ultimate Possibilities of the Mackenzie and Peace River Countries. Address is Heard by Interested Audience.

Calgary, Nov. 4.—At the Canadian luncheon yesterday Mr. J. H. Cornwall, of Lesser Slave Lake, delivered a very interesting and instructive address on the great north land, which was greatly appreciated by the members present.

Mr. Cornwall has during the past few years made a special study of the resources and possibilities of the country along the Peace and Mackenzie rivers and spoke from a thorough knowledge of the country.
