

Adamant

is the Modern Wall Plaster, while old style mortar is a relic of the dark ages, and has been tolerated for centuries for the want of a better substitute.

Adamant dries within three days; lime mortar is soft and damp for weeks.

Adamant only requires heat for ten hours after application in the coldest weather; lime mortar requires heat and constant care for at least a month in such weather.

Adamant is not affected by fire or water, and cannot be broken or marred by furniture. Crumbling walls, falling ceilings, and defaced decorations are unknown where Adamant is used. It is mixed with water, and applied by any mason, in the ordinary

manner. It has been used all over this country and abroad for the last four years, and is endorsed by architects, engineers, and scientific men.

T. B. COCKBURN,

PATENT FLAT WIRE LATHING

64 Canada Street, Hamilton, Ont.

ARCHITECTS AND CONTRACTORS:

Gentlemen: I take this opportunity of bringing to your notice my Flat Wire Lathing, for which patents have been issued in the United States and Canada. The object of the patent is to provide a light, yet substantial Fire-proof Lathing, which offers a smooth, unbroken surface for the reception of plaster; and on which the plaster will key securely. Being made of flat wire, it offers the best plastering surface of any wire lathing. The key is an absolute certainty and is obtained by the plaster turning over the edge of the wire; this will be found invaluable in the plastering of ceilings. Its many advantages over Round Wire Lathing are apparent. An adjustable foot made of sheet metal, having two hooks, is attached to the lathing and takes the place of furring. By means of these feet the lathing can be fixed in position at one-half the cost of lathing requiring furring. After the cloth is woven the feet may be attached in any position required. The cloth may be used in either plain or with the adjustable foot as shown in cut.
