These Maps offer a novel, and most valuable method of communicating Geographical instruction; which needs only to be generally known, to be appreciated. The distinguishing characteristic of the Maps is, that they have no names on them; numbers being affixed to the principal towns, &c., as well as to the more important physical features: these numbers correspond with numbers attached to the Exercises which accompany the Maps, and by the arrangement, a system of practical instruction is developed, which, whilst it lightens the labour of the teacher, engages the attention, and insures the progress of the pupil.

The interrogatory Maps are equally adapted to the use of either public or private schools, and for home education they will be found invaluable. They are boldly, but not vulgarly engraved, and have the physical features clearly and carefully delineated.

Europe, Asia, England, Scotland and Ireland, are published; other Maps are in a forward state.
