

# Printers' Rollers

**WE MAKE** two grades of Composition—"REMELTO" is the best grade and will remelt many times. PRICE, 35c. PER LB.

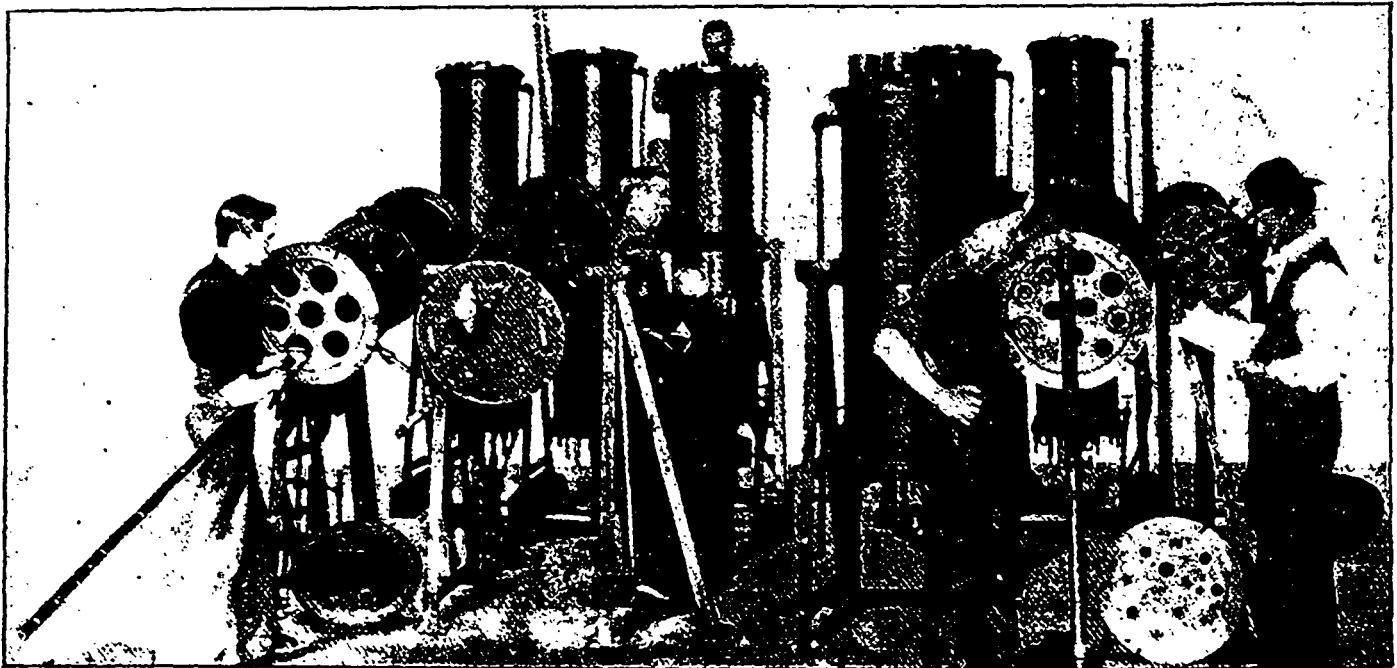

Our second grade of Composition is "PRESSMANS." A first-class Composition, but not guaranteed to remelt. Price, 25c. per lb.

Try Our . . .

**CHILLED FACE  
ROLLER  
COMPOSITION**

The Gatling Gun Process.

## **We are the First**

to cast Rollers singly, in clusters of molds, whereby Rollers of different lengths and grades of Composition can be made in a cluster and chilled simultaneously.

## **We come nearer**

to making an all the year round Roller Composition, suited to all seasons and locations than any other Roller makers in the country.

**WE HAVE** the only modern Roller Plant in Canada, known as a "Gatling Gun" plant. This is the up-to-date method of casting Rollers. The molds are filled under pressure, making solid, perfect Rollers. Every Roller is guaranteed. These Rollers are more durable and in every way superior to the old hand-cast Rollers.

We use only the best materials in our Roller Composition. The ingredients are melted by steam and thoroughly mixed together by electric mixers. Modern science has been made to do service in our Roller Department. Every printer should use our Rollers and Composition. They have no superior.
