

CYSTS OF THE BREAST

These are a few examples of the cases treated, and by this simple procedure a positive diagnosis was made and the anxieties of the patient greatly relieved and without the necessity of an operation, even a minor one. In multiple small cysts this method is of no value and the breast ought to be removed. I have seen and tapped many cases and as they never returned to me I presume they went on favorably. Many of these cases I have been unable to trace.
