## BRITAIN'S FORESTS AND NEW ENGLAND.

*By E. C. Hirst, State Forester of New Hampshire.*

Aroused by the exigencies of the war, Great Britain's reconstruction committee formulated a forest policy for the United Kingdom which was adopted before the armistice was signed and is now being organized. It provided for the requisition of land by the State for tree planting on a large scale, and by advances to private owners for tree planting on their own land on a profit sharing basis. By these means it is planned to build up home supplies of timber and the industries dependent on them. Can we learn a lesson from the experience of our ally?

It is certain that under the stimulus of war needs our pine mills have stripped over 35,000 acres in New England during the last two years, and probably over 100,000 have been cut over by all mills in the State. We can be proud of the fact that we were able so quickly to make available this large amount of New England lumber for the great cause which it served; but we must recognize the extent to which it has depleted our resources. To this end a broad policy should be worked out that will encourage the replanting of our cut over forest lands.

## FRANCE'S POWER OF RESISTANCE.

An American lumberman serving in France has written the following most interesting tribute to the Forests of France in a letter to a friend:

"Over here the lumber business is good, especially the demand. If memory fails me not, in a conversation with you last winter, you mentioned that it was your understanding that they

expected the forestry troops to get out about 20,000,000 feet a month, and you wondered where they were to get the timber to cut that much. Last month we cut 45,000,000 feet and we have orders for 100,000,000 feet a month for several months. Besides the lumber cut last month we made over 300,000 ties, 50,000 cords
