# STONE-PAPER COMPOSITION.

(PATENTED)

APPROVED OF BY THE BUFFALO, N. Y., ASSOCIATION OF FIRE UNDERWRITERS.

It combines the desirable properties of stone and paper.

## FOR ROOFING

When so ordered it is put on over SHINGLE, TIN, GRAVEL or other ROOFING. Cost moderate, and results guaranteed.

It is a pronounced success. It is a modern roof covering, made of material as old as civilization. Tested by time, fire, water and weather. It is spread in one water-proof mass, without laps or seams. It is easily placed in all angles and out of the way niches, and over firewalls, etc. It is WATER-PROOF, FIRE-PROOF and WEATHER-PROOF.

## FOR WALL PLASTER

The material used renders this plaster FIRE PROOF, and very light in weight, there being no lime nor sand in it. Can be put on with a common trowel on any kind of lathing.

Because of the well-known air tight and sound proof qualities of compressed paper, and the hard yet yielding characteristic of the composition, the Stone-Paper Wall Plaster is AIR TIGHT, keeping out heat in summer and cold in winter. It is FLEXIBLE, and will not crack if properly applied, and building does not settle. Dents instead of breaking, when hard hit, and is not broken or cracked by swelling or shrinking of lath. Painting and papering can be done at once; the latter without using sizing. Cost about the same as ordinary lime and hair plaster.
