

# Taylor= "Sovereign" Taylor= Forbes Forbes Hot Boilers and Radiators

A "Sovereign" Boiler is built on the unit principle of construction. This, of course, means that packing is used where the face of the water post joins against the section ends. It is a leak proof connection. If it does leak that will be because the bolts that hold the water post against the section ends have not been screwed up tightly enough. A simple turn of the wrench settles that trouble.

The "Sovereign" is the only house-heating apparatus that can show a clear and plain reason why it should give more heat from less coal than any other make of furnace—The reason is in that larger first section.

Ask the man who knocks the "packed joint" what kind of material he uses on the head ends at the flow and return pipe connections ?
