Search Trade Barriers

Welcome to the CIMAR database of trade barriers, which complements the 2008 edition of Canada's International Market Access Report (CIMAR). It is primarily targeted toward Canadian businesses investigating their export options and possibilities, in order to inform them of existing individual trade barriers they might encounter.

In using the search function below, please note that selecting multiple criteria in the search fields will only return trade barrier information that matches all selected criteria. For example, if you choose "Agriculture, Food & Beverages" under Sector and "India" under Market, the search will return trade barriers specifically relating to agriculture, food and beverages in India.

To view all trade barriers currently in the database, please select "All" in the search fields and leave the Keywords field blank before clicking on the Search button.

Keywords:

Sector:

Product Code:

Market:

1

Honey

Sector: Agriculture, Food & Beverages
 Product Code: 0409 - Honey (natural)
 Product Description: Honey
 Measure: Tariffs
 Market: Korea, Republic

Provisions/Territory: (All)
 Description of the Korea's current tariff rate quota (TRQ) for honey is 420 tonnes; the Measure: tariff on in-quota imports is 20%, while the tariff over the TRQ is 243%. Under the competitive bidding process for import rights, the price of the honey becomes the determining factor in winning the bidding, and it is difficult for higher-quality and higher-priced products to compete within the TRQ.

State of Play: Improved market access is being sought as part of negotiations toward a free trade agreement.
