BIG SMOKING CONCERT SATURDAY NIGHT
Under the direction of Mr. Chas. Hutton.

Head of Russian Soviet Killed at Lausanne.

Tragedies to French Fleet on Banks —Russia's Note to Britain Offers Arbitration—Antwerp in Grip of Postal and Railroad Strike.

DELEGATE ASSASSINATED
LAUSANNE, May 10. — M. Vorovsky, head of the Russian Soviet delegation at Lausanne Peace Conference, was assassinated tonight, as shot several times and killed by M. Ahrens, head of the Soviet Bureau in Lausanne, and M. Dzwilowski were wounded seriously at the Hotel Cecil. A young man, who was seen to be in the room, fled to the Russians and opened fire on the first victim. Vorovsky then turned his weapon on Ahrens, who was struck by three bullets in the chest and once in the shoulder. Ahrens managed to get away, but the water in the room was so hot that he was unable to escape. His name is Maurice Conrad and he is said to be in the Canton of Grisons. Conrad is thirty-eight years of age, and was a member of the Russian Army, and admitted he had formerly served in the Russian Army, and recently from Russia. He had stated his motive. Nothing was found to connect him with the Swiss Fascist who had warned Vorovsky to get out of Switzerland. Vorovsky went to Lausanne to attend the Near East Conference, which was presided over by the Allies, who made Russia's position in the Conference dependent upon short acceptance of the Convention, drawn up at the conference. As a result of this non-acceptance M. Vorovsky has been in London both with the Conference and the Swiss Government. He had the later acted unfairly in directing its representatives in Berlin to refuse a visa to a Soviet courier on the way to Moscow. The Swiss had objected themselves into the Convention this week, when they had a statement, asserting that because of his condemnation of the Swiss Government's action must be reported. The statement that the Fascist were armed and everything was to be established to deal with the representative unless he left the country of his own accord. M. Vorovsky said he would ignore the statement.

ACT OF VENGEANCE.
LAUSANNE, May 10. — The police to-night that the head and brother had been tortured and murdered by Bolsheviks in the terror in Russia. He declared the shooting was an act of vengeance.

WARSHIP FOR MURMANSK.
LONDON, May 10. — The British warship Harebell has been ordered to the Murmansk coast to prevent further Soviet interference with British vessels outside the 3-mile limit, with instructions to use force, if necessary, in performing its mission.

RUSSIA'S REPLY SUGGESTS ARBITRATION.
LONDON, May 10. — The Russian Government replying to the British protest against the seizure of the trawler James Johnson, claims the right to fix the limit of territorial waters at twelve miles from the shore, but offers to submit the matter to arbitration.

TRAGEDIES OF THE FRENCH FISHING FLEET.
HALIFAX, May 10. — The French cruiser Regulus, now in port, has survivors from another disaster to the French fishing fleet on the Grand Banks. About two weeks ago the St. Malo schooner France, of Bretagne struck a berg and sank. Thirty of her crew have not been reported here, while five were picked up by the Regulus. The Regulus also picked up two French fishermen from the schooner La Tour du Pin, who had strayed in their dory and had been ten days and nights on the open sea with little or nothing to eat or drink. They were put in hospital here suffering from frostbites and exposure.

WIRELESS FOR ST. PAUL'S ISLAND.
NORTH SYDNEY, May 10. — A wireless station is to be erected by the Government on St. Paul's Island to replace cable communication. Two wireless engineers landed there yesterday by the Montcalm.

EXPLOSION'S MANY VICTIMS.
CORNICANA, Texas, May 10. — Thirteen identified bodies, three skeletons smouldering in a grim wall pit and possibly a score of others to be uncovered, mark the tally of death wrought late yesterday by the explosion in Giant Gusher McKie number one well near here.

WOMEN THREATEN DIRECT ACTION.
SYDNEY, May 10. — There are too many dives and run-shops in this city and we are going to burn them down. We come to give the Mayor and Aldermen timely warning. This was the announcement made to the chief of police, J. B. McCormick, at the City Hall last night, when a large

delegation of the Ladies' Auxiliary of the Steel Workers Union called to see the Mayor, who was not in. They had just come from a meeting of their local at which it was said the resolution had been adopted.

POSTAL AND RAILROAD STRIKE IN ANTWERP.
ANTWERP, May 10. — This city was almost completely isolated to-day by a strike of Postal Telegraph, Telephone employees and Railroad men, which has completely tied up commerce and the situation is apparently assuming grave proportions.

Scientific Deep-Sea Soundings.

In many places the sea is between three and four miles deep. How are we able to measure these enormous depths? It is done by means of sounding, to make which great skill and patience are required. Specially equipped vessels are equipped for the task, they carry ingenious machines upon which are wound six or seven miles of wire similar to piano-wire. At the end of the wire is a tube two inches across and two feet long, and at the bottom is a trapdoor which opens when the tube strikes the sea-floor. The tube weighs about ten pounds, and in addition there are 3 weights of fifty pounds each. These are fitted in such a manner that they fall off when they reach the bottom of the sea. This is necessary, for when soundings are being taken at great depths the wire would be strong enough to pull them up again. Even as it is, the wire often breaks and the tube is lost.

Taking the Sea's Temperature.
The object of the tube is to pick up a sample of the sea bottom, which is preserved in bottles and sent to laboratories.

When a sounding has to be taken the brake on the machine is released, and the wire runs out at a rate of 5000 ft. a minute. If the ocean is 1000 ft. deep it takes three-quarters of an hour for the tube to reach the bottom.

A special device is used to prevent the wire from being jerked as the ship rolls. The moment the tube shows exactly how much wire has been played out. The wire has attached to it at various intervals thermometers, which show the temperature of the sea at various depths. The greater the depth, the colder the water becomes.

Only very capable seamen are carried on ships taking soundings, for if the vessel is not handled carefully the totally wrong set of results may be obtained. On the surface there is usually a current, while at the bottom there is apparently none. Therefore the ship has to be manoeuvred against the current in order that the wire may be kept vertical.

With the Police Out East.
A party of Sikh police, escorting a group of Chinese prisoners through the jungle, mislaid a couple en route. This worried them, since they knew that the British resident to whom they were to make delivery would assuredly want full count.

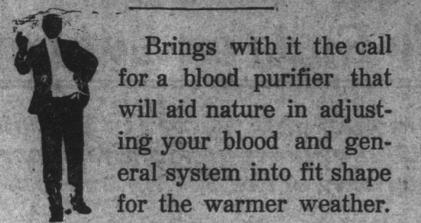

The head policeman, however, was a brainy man, and solved the problem by commandeering the next two Chinese they encountered.

The Malay police are a little more cautious than their brothers, the Sikhs, and guarded against losing their prisoners by bunching them together by their pistols, till the wily Chinese took to wearing false hair!

These are some of the incidents narrated by Mr. Arthur Keyser, in his fascinating book of travel, "People and Places."

Once, knowing the trustful nature of the Malays, Mr. Keyser delivered a special caution before handing over a desperate gang to be transported. That same afternoon he met the party on march, and found the prisoners carrying the warden's guns while the latter sauntered along beneath paper sun-shades.

The Call of Spring

Brings with it the call for a blood purifier that will aid nature in adjusting your blood and general system into fit shape for the warmer weather.

You yourself know, or ought to know how you feel—if you feel listless, lazy, not sick, but far from well, then you need a good

BLOOD TONIC
and we have the best on the market
Viz:
Mandrake Bitters.

These Bitters are purely vegetable, and are a valuable alterative and strengthener and a purifier of the blood.

money at their tables. Is it not right to arrest them for breaking the law?" — Pearson's Weekly.

Hints for Your Home.
A mustard plaster made with the white of an egg will not blister the skin.

If the cords of Venetian blinds are wiped over with an oiled rag they will be less liable to break.

Use rock ammonia for softening the washing-up water if soda makes the hands hard and rough.

If the milk is warmed before adding the eggs for a custard, no water will be found in the dish after cooking.

To prevent potatoes turning black, add a teaspoonful of vinegar to the water in which they are boiled.

To clean aluminium saucepans, wash them in hot, soapy water, using a little silver sand if necessary to remove discoloration or burnt matter.

If a fishbone gets lodged in the throat, gargle with solution of carbonate of soda and water. There are no injurious results if the gargle is swallowed.

The Making of Pastry.

The eating of plain food goes a long way to maintain a good digestion. Not only so, but it is also true that plain food, if properly cooked, builds up the system, whereas the constant eating of rich foods is really harmful. The virtue of plain cooking should also be recognized in the matter of pastry making.

Housekeepers must always be on their guard against the tendency to make their pastry too rich. For family purposes it is well when making pastry to mix the fat and flour in the proportion of half the fat there is of flour. If dairy made and well fried, plain pastry of this kind is better and more wholesome than a richer variety. In the recipes which follow clear directions are given for turning out a few dishes with flaky pastry.

BEUF STEAK PIE.
Wipe and cut into neat pieces 1 1/2 lb. of shoulder or rump steak, also a sheep kidney. Dip these in seasoned flour, and fry in little fat in the stewpan. Add a teaspoonful and a half of water, stir until boiling, then simmer for one hour and a half, two hours, or until tender. When ready put into pie-dish with a hard-boiled sliced egg.

Put six ounces of flour on to a bake-board, cut up amongst it 1/4 ounce of butter or margarine. Put all into a basin, add half a teaspoonful of baking powder, and form into a stiff paste with a little cold water. Turn out, roll three and a half times, lastly rolling a little larger than the pie-dish. Cut bands for the edges, wet these, cover the pie, make a hole in the centre, decorate, brush with egg. Bake until the pastry is brown, and the gravy is beginning to bubble out.

Your Best Ear Foremost.

Which ear do you use the most: your right or your left? Off-hand you probably can't say, and perhaps you never even thought of it before, though you have known from earliest youth whether you were right or left-handed.

Yet most of us hear better with one ear than the other. Children and women, and most men, when listening for some faint sound, when listening. Though they do not know it, they are bringing the stronger ear towards the sound.

When you are sitting in a bus or train, try closing one ear and listening to the sounds with the other ear. You will be surprised at the difference unless you are a person the capacity of whose ears is exactly the same.

In one ear the sounds will be much louder and clearer, while in the other they will be fainter and more confused. If you are listening to music you will find the same again, and in this case the music sounds better and more musical in your best ear.

How to Make Blue-Prints

This is a delightful amusement for later on, when the days are hot; and all the materials you want are a photographic printing frame, some blue-print paper, and a little clean blotting-paper. If the frame is seven inches by five, you can use it for either large or small pictures. Choose a leaf, say maple, beech, or oak, or a fern frond, and lay it face downwards on the glass of the frame. Then on this put the sheet of blue-print paper, with the sensitized side next to the leaf, fasten the frame, and put it in the sun, when it will at once change colour. It must be exposed for four or five minutes; experience very quickly teaches you what is the best time, and then it must be taken from the frame and thoroughly washed in clean water. Next it should be placed between the blotting paper, and after a while taken out and dried. The thing you must be careful about is taking a fresh piece of paper from the box where you keep it. Handle it as little as possible, and do not expose it to the light till in the frame. It is a good plan to have a book at hand, and quickly slip the sheet into this to keep it from the light whilst you close

the box. Even inside this latter the sheets of paper should be in a black envelope, not lying loose.

Home Remedies of Our Ancestors.

Almost every man and woman in America can remember the botanic recipes of our mothers and grandmothers for the treatment of disease, and they were wonderfully dependable too. Every fall there were stored away in the attic thoroughwort, pennyroyal, catnip, sage, wormwood, rue, etc., for treating ill of the family during the winter months that followed. In 1872, Lydia E. Pinkham's Vegetable Compound was first prepared from one of these botanic recipes, and the demand for it has increased to such an extent that hundreds of tons of roots and herbs are now used annually in its preparation. It has recently been proved that 95 out of every 100 women who try it have been benefited by its use, which is a marvelous record for any medicine to hold.

In New York a woman doctor claims thousands have died from kissing. That's nothing compared to those dying to be kissed.

LIKE JELLY ROLL!
Yes? Then you will surely like ours. Made from the purest and most wholesome sponge cake and the purest and most delicious home-made jelly. The kind you used to get in the good old days—here once more at
