*and*

**CANVAS BELTING,**

**ELEVATOR CUPS**

## McLAUGHLIN & MOORE,

*(Royal Dominion Mills)*

- TORONTO

THE LATEST AND BEST INVENTION FOR ROLLER MILLING.

### THE CLIMAX FIRST

— AND —

### SECOND BREAK ROLLS

These Breaks will take no more feed than they will properly reduce to middlings.

In placing our Climax Break Rolls before the public, we are satisfied that nothing has yet been introduced in the manufacturing of flour that will be of so much benefit to any system of milling as the Climax Break. By it, we can produce more pure middlings with two breaks than is produced in any long system mill on five. The principle applied does not cut up the bran; it simply takes out the flour from the wheat in the form of pure middlings, leaving the bran broad and easily cleaned. By its use the work of a mill is commenced right, and because of this there is no necessity of a lot of machinery to handle the impurities which are made when the beginning is improperly done. What we claim for our Climax Break is that we make more patent flour, less low grade, broad flaky bran, and a saving in power.

We have obtained letters patent in Canada, United States and Great Britain, covering this principle and its application, and are now prepared to grant license for its use, on reasonable terms.

MESSRS. JAMES JONES & SON, THOROLD, ONT.

TORONTO, July 24th, 1890.

GENTLEMEN,—Your new Climax Break which you put into my mill at Lambton has given perfect satisfaction as to working and results. My head miller informs me that it has increased the capacity of the mill, and has had also the effect to improve the colour of the flour.

Yours truly,

W. P. HOWLAND.
