

Neilson's Ice Cream

It's Pasteurized
It's Homogenized.

The reputation of Neilson's Ice Cream is so thoroughly established that it is unnecessary to say how good it is. If you are not acquainted with its many points of excellence your neighbor can probably supply you with the necessary information, for nearly everybody eats Neilson's Ice Cream.

For a party or home use you can provide nothing more acceptable during the hot days than some of our Ice Cream.

We deliver it at your home packed in ice, so that it will keep in excellent condition for from 5 to 6 hours.

The same care is given an order for one quart that is given a larger order.

ADDITIONAL LOCALS.

An eagle with a bell hung around its neck was recently seen near Bath, Maine and has been identified as one of a number of these birds caught more than twenty-five years ago by a man, near Harpswell, Maine, and released after he had attached bells to their necks.

The get-rich-quick fad does not have much of a chance in Germany in these days of wars and tribulations as the authorities will not permit unreasonable profits to any individual. A peasant woman recently, who wished to increase her revenue sold a pair of oxen for \$725, making a gain of \$425, as she had only paid \$300 for them. For her pains and business tendencies she received a sentence of six weeks' imprisonment.

If you have made up your mind to live in a town, then stand up for it, and if you know positively no good, then silence is golden. Do all you can to help along every man who is engaged in legitimate business. Do not send away for everything nice you want and still expect the home men to keep a stock to suit the whim of one or two customers. The success of your fellow townsmen will be your success.

The epidemic of Infantile Paralysis continues to haffle the medical skill of New York and Boston. Dr. Simon Flexner, an authority on the disease, suggests that it is imported by immigrants. It appears that the disease strikes at the healthiest children. It consists of a small as yet undiscovered organism that attacks the contents of the spinal cord. A healthy child may go to bed at night and be down with paralysis before he awakes. Experiments with monkeys conducted with extreme care proved that infantile paralysis could be transmitted from one patient to another.
