DAY'S DESPATCHES

ALL EMPLOYEES ESCAPED.

London, May 20 .- The works of the Welsbach Incandescent Company, at Westminster, caught fire to-day and several floors of the building were gutted. The thousand odd employees succeeded in making their escape. The building adjoins the St. James' Park Station of the underground railway, and traffic was suspended. The damage to the building and plant is estimated at £20,000.

WOMAN AND HER GRANDSON KILLED BY A TRAIN.

John, N. B., May 20. - While peeding past Bloomfield Station, 20 miles from this city, yesterday, C. P. R. express train from Halifax struck and killed Mrs. Fillimore, mother-in-law of the station agent, R. A. Brown, of Bloomfield, and Cecil Brown, aged five years, son of the station agent. They were trying to cross the track in front of the train, and both met instant death.

DOWN AN EMBANKMENT.

Ardmore, I. T., May 20-A construction train was wrecked to-day twelve miles east of Ardmore, on the Choc-taw, Oklahoma & Gulf Road. Four men were killed and 17 seriously injured. The dead: Chas. A. Black, Tishmo ingo, I. T ...; Jas. Dolan, Fort Smith Arkansas; J. A. Gaines, James Hope-good, Tishomingo, I, T., fatally hurt; A. M. Oliphant, Tishomingo ; James Weir, Ed. Clark, Arkansas; Hope Joy, Texas. The train dashed down an em-bankment 25 feet high.

KILLED BY A WATER-POUT

Cincinnati, May 20 .- A severe storm swept over this locality about 11 a.m., to-day, and there was a water spout in the Lewisburg hills, just south of Covington, Ky., which caused a wave of water twenty feet deep to come down the hill and submerge the valley. The frame house of a family named Millens was carried over four blocks and dashed to pieces against the Coving-ton ball park grand stand. The bodies of Mrs. Millen and her child have been recovered. It is thought that several other lives were lost., The weather bureau reported the velocity wind at 58 miles per hour, and the rainfall 2 1-3 inches. Des. Cont.

COL. GAYNOR'S STORY.

Quebec, May 20 .- Col. Gaynor and Capt. Greene arrived in Quebec this morning at 3 o'clock by special train from Montreal. They came in the custody of Governor Vallee, of the Montreal jail, and on their arrival were taken to their old quarters in the Chateau Frontenac. Col. Gaynor, in conversation with a reporter, said that when he was arrested here he did not have time even to think. He was forcibly carried away, and time, when he attempted to call from the wagon to a party whom he knew, one of the detectives placed his hand over his mouth. He also said that he attempted to resist at the wharf, but was forced on the boat and into a narrow cabin, and there kept prisoner. He says that he knew nothing of the attempt to serve the writ at Three Rivers, as he and Greene were kept in close confinement, and could not even look out on the river.

Visited the Princess Louise.

An Ottawa' young lady, who was ne of the party of teachers for South Africa that left Halifax in the Corinthian, writes that permission was given them to spend a week in London. She gives an account of a visit paid to the Princess Louise and the Duke of Argyle. The writer states that the Princess looks very much the same as when she resided at Rideau Hall several years ago. Continuing, the teacher says: "For she has the lovliest of complexions, and her hair is so bright and fluffy, and her figure is charming. The Duke has changed more, I think. His hair has grown quite silvery, and the slimness of his figure is gone. There is a slight huskiness of voice, too, that was not noticeable in the old days. I had quite a long talk with his Grace, and he asked me many questions about Ottawa. He particularly mentioned Eddy's mills particularly mentioned Eddy's mills and the interest he used to take in them, and expressed great regret that the fire had swept them all away. He said he had been the first to suggest the manufacture of pulp to Mr. Eddy, and to show his devotion to the 'Lady of the Snows' he showed me a waste paper basket and a pail manufactured by the Eddy works. Nothing could have been more charming than the treatment we received from the Princess and the Duke." from the Princess and the Duke."

BACK-ACHE

Dodd's Kidney Pills

A man who was bicycling in southern France was pushing his machine up a steep hill when he overtook a peasant with a donkey cart. The patient beast was making but little progress, although it was doing its best.

The benevolent cyclist, putting his left hand against the back of the cart and guiding his machine with the other hand, pushed so that the donkey taking fresh courage, pulled his load up the hill. When the summit was reached the

benefactor. "It was good of you indeed, mon-sieur!" he protested. "I should nev-er have got up with one donkey."

A Petrified snake.

The other day while working at Ransford's quarry at Goderich, James Hogarth and James Forbes found a snake, measuring 18 inches in length, firmly embedded in the stone they were blasting. The onetime reptile was perfect in form, and a short distance away might be taken for a living snake. How the reptile got into its prison house could not be ascertained, but the probabilities are that it was dead, ot mixed in with refuse of some being near a petrifying kind, and oring, the whole mass was turned nto stone together.

This Happens Every Day.

loors, exposed to the weather, say for a month, it loses one-third of its heating qualities. If a ton of coal is placed on the ground and left there and another ton is placed under a shed, the latter loses about 25 percent. of its heating force, the former 40 per cent. Hence it is a eat saving of coal to have dry place, covered over on all sides. The softer the coal the more heating power it loses, because the volatile and valuable constituents undergo a slow combustion.

The | Maid Blushed. When Mr. David Dear, winner he Queen's prize at Bisley, was the Queen's prize at Bisley, was a law student, he once attended an "at home." On the servant asking his name, he replied, "David Dear." The girl blushed and said "Yes, yes; but what is your other name,

He assured her he had no other name, but it was of no use. The servant knew better and announced him as "Mr. David."

SENSITIVE TO SOUND

ACUTE POWERS OF HEARING WITH WHICH FISH ARE ENDOWED

some Interesting Experiments That Were Made to Determine Just What Manner of Noises or Motions Would

There are three phases of sense in fish particularly interesting to the angler-their exquisite powers of hearing, of seeing and their subtle, abnormal sensitiveness to atmospheric influence. With all our experience and study it is doubtful if we have arrived at anything like a full estimate of the acute sensitiveness with which fish are endowed. I devote this article to hearing. By hearing I must obviously be understood to mean their power of appreciating the vibration caused by sound, the conductor being either solid, aerial or liquid.

In man sound detonates the eardrum. and in that way when we are under water we discover little intelligible meaning from sounds. But the same vibrations are undoubtedly received by the exquisitely sensitive hearing intelligence of a fish, if I may use the term, in a different and far more impressive way. By intelligence I mean an instinctive recognition by their bodies of some disturbance, just as man recognizes a passing breath of sir. It takes the form of feeling.

I came to the conclusion that I would make a few experiments: Here are one or two facts: A friend entered into it with me, and we bethought ourselves of certain well known trout in our preserve which were "always there." Then we placed thatched hurdles a day or two beforehand so that peasant burst into thanks to his the fish might get accustomed to them in such a way that we could approach close to their haunts without being seen and watch the unsuspecting trout through a small hole cut in the straw When one was not at home, the other generally was. My friend undertook

the noise making, I the observation. From the sound of a gunshot 500 yards away, which made our trout distinctly start, to the breaking of a twig three yards from the fish, which did the same, we tried all kinds of sounds, shrill and dull and at 'varying distances, and the sum of our experiments convinced us of this: That our sensitively organized friends felt the displacements of molecules through ether, which we call sound, and the further vibrating disturbance through what we call water, which I verily believe conducts sensation to the fish as readily as glass permits the penetration of If a load of coal is left out of light to this paper, in proportion to the distances and the character of the sound, but that they did hear, or feel rather, and with incredible quickness

too, was conclusively demonstrated. What they heard and were not alarmed at I cannot tell, but when they were alarmed it was evident enough by the same kind of start they give when their chief enemy suddenly peeps over the bank. In only two cases could I discover actual fright, the fright that sends them down-a gunshot behind the hurdle and a heavy stamp of the foot near by. It is noteworthy that the shrill sounds seemed to startle them most. For instance, a policeman's whistle at ten yards sent one out into the stream as if looking about for some source of danger, whereas a shout at the same distance caused no detected movement. Their way of shifting a little farther from the bank when they have an inkling of danger is a very pretty side movement, well known no doubt. It seems for the purpose of watching the bank at a better angle. The common manner of showing their alarm was by a sudden quiver, sometimes followed by a sinking down an inch or two, as much as to say, 'What's up?' I very much doubt if I ever crept up to my peephole without being detected, and yet I was careful, for, if you notice, a trout once on the qui vive gives no sign of alarm at a second movement or noise. Once prepared he is immovable till he suddenly darts off. You may throw your greatcoat at him, and he either braves it stolidly or bolts cleans away. Five minutes' perfect stillness and they settle back to confidence, and then they were again easily startled. I fancy the laws of refraction had something to do with it and that even from the sky they some times perceived my movements. I had often suspected this before. Another conclusion: I believe they

heard much they appeared not to. A sudden smack of the hands together, and there was a decided quiver, but a bird rattle, begun very softly and gradually brought up to its very loudest, and no notice seemed to be taken. But doubtless, like ourselves, however loud the noise, the gradient robs it of its startle. However fanciful it may sound, of this I am thoroughly convinced—that water is such an immediate transmitter of vibration to fish that they recognize sound from the air nearly as quickly as man. It is no argument to say we do not when in it. We have no need. Fish have. And because they have they are providentially andowed with supersensitiveness to that particular nervous influence among thers .- London Field.

Two Crops. "Funny about young Spenditt, wasn't it?" said the observing man. "Was it?" asked the man of an in-

"Yes; he lost his money raising Cain in Europe and then made another for-tune raising cane in Louisiana."
