The Romance of Electricity.

"Bearing upon current discussion of the possibilities of the greater use and wider distribution of electricity for light and power purposes are statistics recently published by the Bureau of the Census," says the Boston Transcript. "The growth of the electrical industry. Forty years ago the country's entire investment in electric light and power plants was not much more than \$1,000,000. It was less than that amount in 1880. To-day it is approximately \$5,000,000,000, with an annual gross return of a billion. The securities of electric light and power companies are owned by 1,750,000 persons.

The number of homes in the United States is estimated to be 22,500,000. Of this total, 8,500,000, or more than one-third, are wired for electrical service. It is a fact that could now be extended to 5,000,000 additional homes. In other words, present facilities would permit the supply of electricity to more than half the homes in the United States.

In 1922, approximately 1,000,000 homes were wired and equipped. The figures suggest the speed coming of the day when the dwellings without electric light and electric power for domestic use will be in the minority.

Electric traction has been largely responsible for the growth of the cities. Population of United States cities of more than 5,000 inhabitants has increased in forty years from 8,000,000 to 37,000,000. It has doubled twice in the four decades. In the same time the population of the country as a whole has doubled but little more than once. It was 50,000,000 in 1880; 105,000,000 in 1920. Now there are those who hope that the greater production and wider distribution of electrical power with the accompanying lowering of the cost of transportation will serve to check the further crowding of great numbers of people into the congested areas of the cities.

However that may be, the growth of the industry as pictured in these figures of the Census Bureau suggests fascinating possibilities of what may be expected in the future. It calls to mind also the romance of much that is being done in the present in connection with electrical development, including the triumphs of the engineers who create great lakes for the purpose of making reservoirs of hydraulic power to be converted into electricity and flung over power lines, climbing mountain ranges, suspended over broad rivers and hidden under city streets, thus making available energy which may be used in running a railroad, keeping ponderous machinery in motion, and operating a little device to save the householder from the labor of winding the phonograph.

And yet there are people who maintain that modern life has lost the savor of adventure and the inspiration of romantic achievement!

Canada Losing Her Trade in Nfld.

Several of Newfoundland's importing houses declare that Canada is losing trade to the United States for the reason that there is no trade representative in the country to represent Canada in keeping in touch with conditions.

The United States Consul at St. John's is in close touch with the business community with the result that business is going to the States which formerly went to Canada. Canada did have a commercial agent here but for some reason he was withdrawn.

One importing house asked the financial Post regarding Canadian losses and "your representative was able to give him the names of two companies of which he did not know and with whom he has promised to communicate.

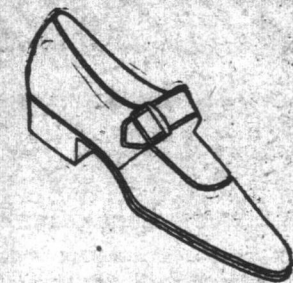

Inquiries by the Financial Post confirm that Canada has now no trade representative in Newfoundland. At one time there was an arrangement by which a commercial agent gave the Canadian Government part of his time, but this was cancelled and all that is done at present is that a junior trade commis-

Warm Weather FOOTWEAR!

For Women and Children

Children's Canvas Shoes.

Child's and Misses' Brown Canvas Shoes—"Skuffer Style" with Leather sole. A good knockabout Shoe. Sizes 5 to 8 \$1.20, 9 to 11 \$1.40, 12 to 2 \$1.65

soner goes to Newfoundland every few months and stays there for a short time. The matter has been taken up with the C.M.A. and laid before the department of trade at Ottawa. The department has felt that the market is one which should be developed by the manufacturers through their own representatives. It is to be hoped, however, that Hon. Mr. Robb, who has been reorganizing his department in a very efficient way, will go further into this matter to see that Canada is given such representatives in Newfoundland as justified by trade opportunities.

HEMORRHOIDS

Do not suffer another day with itching, bleeding, or protruding Piles or Hemorrhoids. The surgical operation required, Dr. Chase's Ointment will relieve you at once and afford lasting benefit. See a host of dealers or Dr. Chase, 100, Queen St. W., Toronto. Sample box free.

Trade figures which have just been published by the Dominion Bureau of Statistics, show that Canadian exports to Newfoundland, which amounted to \$16,175,443 for the year ending in 1920 and \$16,676,728 in 1921 declined to \$9,317,639 in 1922 and \$5,523,264 in 1923.—Financial Post.

Young Americans Promise Well for Paris Olympics.

NEW YORK, July 1.—(A.P.)—A potential Olympic champion for the United States, that's what experts predict for Frank Hussey, sensational Stuyvesant High School sprinter, who was credited recently with equalling the 100-yard dash, a mark held jointly by Charley Paddock, Howard P. Drew and D. J. Kelly.

down in official records along with those of Paddock, Drew and Kelly, it stands out as one of the greatest track performances of the season. The schoolboy marvel's performance occurred in the public schools' track and field championships, and was subjected to the closest official scrutiny. Three A.A.U. timers caught him in 9 3-5 and a fourth even a trifle faster, close to 9 5-10. All testified that his start was perfect, but it was thought a slight wind that blew diagonally across the track might influence official decision on Hussey's achievement.

Hussey has sprinted the "century" consistently around the 10-second mark. He was credited with two performances of 10 1/2 seconds indoors last winter, and in his first outdoor appearance was clocked in 9 3/10. He equalled this mark twice in later meets and broke the tape in 10-flat and

11-5 in two other races. Besides the young New Yorker, several other schoolboy stars in various parts of the country have demonstrated that they may be Olympic timber by next year. Eugene Goodwillie, of Chicago, national interscholastic sprint champion, covered the 100 in 9 4-5 and the 220 in 21 2-5, the latter a new American interscholastic record, at the title meet in Chicago.

Other schoolboy stars whose performances have stood out this spring include Hamm, of Lenoire, Ark., who set a new interscholastic broad jump mark of 23 feet, 8 1/2 inches; Kuck, of Wilson, Kansas, a promising all-round field performer who has been tossing the 16-pound shot well over 40 feet; and Paulsen, of Hill School, who equalled interscholastic records in both the 120-high and 220-low hurdles.

Mozart's Grave May Be Effaced.

Unless the plans of city officials are soon changed the famous Cemetery of St. Marcus, in Vienna, known to thousands of American tourists as the last resting place of Wolfgang Amadeus Mozart, will be removed as a block to progress. And, with the cemetery, so remains of the immortal composer will vanish into eternal obscurity. Mozart, who died in abject poverty, was buried in an unmarked grave at St. Marcus in December, 1791. His widow, Constanza, did not attend the funeral, and when she visited the graveyard for the first time seventeen years later the old grave-digger who had buried her gifted husband was dead. And as no records had been kept to record of Mozart's grave was lost. Now, with the removal of all remains from the cemetery, even his burial place will be unidentifiable. The Vienna Mozart Society is demanding that the city erect a tablet on the cemetery site commemorating the fact that Mozart was once buried there.
