How are you off for *Schaphinotus elevatas* up there in Ontario? A few days ago, in half an hoar, I took thirty from under old railroad ties lying along the track. I was sufficiently *elevated* with my success for one day, and ceased further operations, lest I might exterminate the species !

J. C. MORRIS, Baltimore, Md.

## IMPORTANT CAPTURES.

DEAR SIR,-

I made, as I think, a very important capture on the 26th of August which you and some of your readers may be interested in knowing, viz., two fine, fresh and absolutely perfect examples of Catocala marmorata This is, I think, unquestionably the handsomest of all our Edwards. I was not a little surprised, and as might known species of *Catocala*. well be imagined, delighted beyond measure to find two such unexpected My friend, Mr. Charles Dury, of Cincinnati, informs me in a strangers. letter received from him a few days ago that he also took one this season in his locality. A figure and description of this truly regal insect may be found in Strecker's work, Plate 9, No. 6. In a note accompanying his description he says : "One can but regret that so little concerning this fine species is known; the original description contains no further remarks than 'from Yerka, California,' and we can only hope that time, which 'at last sets all things even,' will enable us to receive specimens and learn more concerning this superb insect."

My specimens are both males; they were found on the trunks of two separate trees (White Wood or Tulip tree), fifty or sixty feet apart, about five feet from the ground, and both were started before I noticed them, but their flight was very short—only darting around to the opposite side of the tree, where they remained perfectly quiet until I covered them with the bottle.

The peculiar brown dash or band which obliquely traverses the primaries near the posterior extremity, is more dense in my specimens than is represented in Strecker's figure. Mr. Dury says in his it is quite black.

The abdomen of Mr. S.'s figure is, as he tells us, nearly imaginary, the specimen he had to work from not having any remaining, and he was not certain even as to which sex it belonged. The abdomen of mine is very much like *parta*, but heavier, and a shade darker. Length of body  $1\frac{1}{2}$  in.; diameter of abdomen in middle,  $3\frac{1}{2}$  lines. Anal brush white beneath and blackish above.
