

Leipzig Medical Klinik, vacant by the death of Prof. Wagner. Erb is especially known from his contributions to Neurology, and Leibermeister to Fever and its Treatment.

—Cremation in England, according to the returns of the Cremation Society, appears to be gaining in favor, as during the present year they have cremated five bodies at their working crematorium. In the case of a child eight months old, the ashes weighed only eight ounces. Up to the present time thirty-five cremations have occurred at the Society's crematorium.

—Mr. G. J. Romanes has been elected Fullerian Professor of Physiology at the Royal Institution, London. He intends to devote the three years of his professorship to one continuous course of lectures on "Before and After Darwin." This year's course—"Before Darwin"—will give an historical survey of the progress of scientific thought and discovery in biology from the earliest times till the publication of "The Origin of Species." Next year's course will be on "The Evidences of Organic Evolution," and the third year's course on "The Factors of Organic Evolution."

—The matter for Fairchild Bros. & Foster's advertisement in this issue is taken from the original remarks of Dr. William Murrell in a lecture delivered at Westminster Hospital, London. This testimony is from a high source, and coming, as it does, so entirely independent and unsolicited, speaks well for the superiority of Messrs. Fairchild Bros. & Foster's "Pepsin."

—A. M. Sittler, M.D., Bowmanstown, Carbon Co., Pa., says: Have used Tongaline extensively during an epidemic of dengue or break-bone fever, where I had an opportunity to test it very thoroughly, and I secured much more successful results from it than from the ordinary treatment, consisting of pot. iod., vini colchici, acid salicyl., quin. sulph., etc. In every instance tongaline fully sustained the high character with which it is presented to the profession, and only deserves to be well known in order to be thoroughly appreciated.
