

objectives; and

(ii) the obligation identified in paragraph 6 for AABM fisheries has been complied with in all other AABM fisheries that affect the stock or stock group for two consecutive years that the stocks or stock groups have not achieved agreed biologically-based escapement objectives;

(e) the measures specified in sub-paragraphs (b) and (c) above apply to an ISBM fishery when the provisions of sub-paragraph (a) have been met, and:

(i) the obligation identified in paragraph 4 for ISBM fisheries has been complied with in all other ISBM fisheries that affect the stock or stock group for two consecutive years that the stock or stock group has not achieved agreed biologically-based escapement objectives; or

(ii) the measures specified in sub-paragraph (b) or (c) are being implemented in an AABM fishery that affects the stock or stock group;

(f) where, on the basis of a pre-season forecast of abundance, it is bilaterally agreed that, due to extraordinary natural circumstances, the continued biological viability of a stock group is seriously threatened, the harvest rate responses in the relevant fisheries set out above will be applied in the same year if management action is part of further complementary and coordinated management actions being taken in other marine and freshwater chinook fisheries affecting the stock group; and

(g) either Party may recommend, for conservation purposes, that the Commission adopt harvest responses in the relevant fisheries that are greater than those identified in sub-paragraphs (b) and (c) above.
