

president, W. G. Dickinson, Victoria; secretary, C. H. Lugin, Victoria; treasurer, E. E. Welsch, Victoria. Preliminary to beginning the manufacture of pulp the company will establish a saw mill at Quatsino.

P. C. Hohlenburg and J. T. McNeill, of Cleveland, Ohio, representing an American syndicate, recently secured an option on the properties of William Bruckhof and William Godard at Springdale, Kings County, N.B. It is understood that if the option is taken up a pulp mill will be erected on the property.

An idea of the importance of the pulpwood industry in the Eastern Townships of Quebec, is shown by the fact that the Quebec Central Railway alone has carried 80,000 cords of this wood since last spring. This wood cost \$20,000 to load on the cars and yielded the railway \$100,000 in freight. Farmers sell the wood for \$4 per cord, when barked, and four feet in length.

The December meeting of the American Sulphite Manufacturers' Association was held in Boston on the 3rd

ultimo, among those present being Charles Riordon and George E. Challes, of the Riordon Paper Mills, Merriton, Ont., and M. F. Mooney, of the St. John Sulphite Pulp Company, Mispec, N.B. It is understood that the reports submitted showed that the mills were well sold up, with very small stocks on hand.

F. H. Clergue, of the Sault Ste. Marie Pulp & Paper Company, does not fear a retaliatory duty on pulp imported into the United States. He contends that the extra duty would have to be paid by the consumer, and that if the law were applied in the case of pulp, by a parity of reasoning it must also be applied with respect to lumber. This would bring about an awkward situation, as many American companies have built large saw mills in Canada.

A very distinguished party of British merchants and manufacturers, representing the London Chamber of Commerce, who are now touring Canada, were banqueted by the Canadian Manufacturers' Association in Toronto on November 21st. In the speeches the pulp

wood question was repeatedly referred to. Hon. G. W. Ross, Premier of Ontario, pointed out that England consumed 504,000 tons of wood pulp annually, of which only 78,000 tons came from Canada. He advocated the building of British mills in Canada and the consolidation of the empire by each part purchasing as much of its supply as possible from some other part, instead of from a foreign country.

The Toronto Globe is not in favor of an export duty on pulp wood. Summing up the situation it says: "It is clear that the export duty will accomplish everything the paper manufacturers desire, but not so clear that it can be imposed without inflicting serious hardships on many settlers and other owners of pulp wood. Canada is too fully dependent on the advance of settlement to risk the restoration of early and onerous conditions until it is clear that important public interests are to be served by the change. The paper-making industry is entitled to every consideration, and its interests should be furthered in every way so long as no other Canadian interest is adversely affected."
