

especially affected; indeed, in every part where there was much pressure the rash was thickly distributed. On the anterior surface the only parts affected were the face, upper part of thorax, shoulders, thighs,

FIG. 2.

and dorsum of right foot, and in no place was the eruption very abundant. Over the shoulders and arms the eruption was most violent, the extravasations leading to neerosis of the skin. Several crops of eruption came out from time to time, but none was so severe as the first.

When the spots first came out they had exactly the appearance of urticaria, the wheals varying in size from a ten- to a fifty-cent piece and elevated above the surface of the skin. At times they were slightly itchy, and the patient complained of stinging sensations. Soon
