

FROST AND WOOD

NO 8

Mower

TIGER Rakes and F. & W. Mowers have behind them 70 years of experience and skill in making the very best farm machinery. The rake is all steel, with automatic trip, and a truss rod under the frame to hold the teeth exactly right. Breakages are practically impossible. It will last a life time.

The Frost & Wood Mower has roller bearings on axle, cross and crankshaft. Its gears and pinions are arranged on the famous "internal gear" principle, which prevents noise, binding, choking and broken knives.

Get absolute dependability in your haying machinery. This Mower and Rake have in them every feature that minimizes stops and accidents during haying. Examine them closely. Investigate carefully. They will pass the test of service, season after season.

"INTERNAL GEAR" WHAT IT DOES.

THE F. & W. Mower takes power from the inside of a rack on the left main wheel. In this position, three rack teeth are always in mesh with two pinion teeth. This divides the wear—means smooth running. It is the easiest cutter made.

Even after years of use, these teeth are still in close mesh. The knife cuts the moment the mower moves. This prevents choking, broken knives, accidents and field repairs. You avoid loss of hay and wages by perfect design.
