Crop Reports.

The Modern Miller says: Cool weather in winter wheat territory is causing heads to fill while the condition of the plant is good, but fears are entertained that a poor yield will be made, with a large percentage probable. Thrashing reports from Texas show a larger average yield per acre than usual. Cutting reports from twenty counties out of forty-four generally indicate a backward condition of crops as compared with a year ago, on account of cold weather and lack of precipitation. Local showers have relieved the situation somewhat.
