

ILLUSTRATIONS

Photographs.

	Specimens of gold ore from the Engineer mines, Athlone mining district, B.C.	Page
I.	Taku landing	6
II.	The Coast range in the distance, showing the striking and characteristically uniform summit level	16
III.	Looking eastward across Taku arm showing a typical view of the Yukon Plateau region	18
IV.	A typical rounded summit south of Graham inlet	20
V.	Looking across Taku arm and up Racine valley toward the Coast range	20
VI.	Near view of a typical portion of plain-like upland	22
VII.	Looking northeasterly toward Mt. Stovel	22
VIII.	Looking easterly across Taku arm toward Sunday peak	22
IX.	Near view of a dissected portion of upland	22
X.	Looking eastward across Athlone lake	22
XI.	Looking southwesterly from the summit of Hale mountain	24
XII.	Looking westerly toward Mt. Chive	24
XIII.	View of a portion of the Coast range just west of Whitewater mountain	24
XIV.	Looking easterly across Taku arm, Graham inlet and Athlone lake	26
XV.	Looking up Taku arm from near the Yukon and British Columbia boundary	26
XVI.	Looking southwesterly toward Golden Gate	28
XVII.	Looking across Taku Arm valley	28
XVIII.	Typical cirque on Tetterly mountains in the Yukon Plateau region	30
XIX.	Near view of the Coast range	30
XX.	Looking across the upper end of Taku arm	30
XXI.	Looking northwesterly across the extreme head of Taku arm	30
XXII.	Showing a typical wide somewhat heavily timbered depression	31
XXIII.	Looking across the valley of Fantail river and along the eastern face of Hale mountain	31
XXIV.	Showing the typical basaltic jointing of some of the andesitic rocks on Ear mountain	66
XXV.	Looking easterly across Taku arm from Hale mountain, showing position of the Engineer mines	74
XXVI.	Entrance to the tunnel on Vein No. 5 at the Engineer mines	82
XXVII.	Bunkhouse and cookhouse at the Engineer mines	82
XXVIII.	Mill at the Engineer mines	82
XXIX.	Looking in a southwesterly direction up Taku arm	94
XXX.	Looking up the valley of Bighorn creek	96
XXXI.	Photographs of polished specimens of ore from the central portion of the 30 foot mineralized dyke on the Big Canyon group, Athlone mining district, B.C.	110
XXXII.	Microphotographs of thin sections of ore from the French claim of the Laverdiere group, on Hoboe creek, Athlone mining district, British Columbia	120

Drawings.

- FIG. 1. Geological section south of Golden Gate, showing the plateau surface truncating the different rock formations, and cut by the valley of Taku arm
- FIG. 2. Diagram showing the strikes of the veins at the Engineer mines, Athlone mining district, British Columbia
