The column for Maximum Thermometer shows the highest temperature for every day.

The column for Minimum Thermometer shows the lowest temperature for every day.

## The Farmer's Corner.

## Harvesting Grain.

Men differ as to the best and proper time to cut wheat. Many say it should stand until the grain is quite hard, and then be cut and put into the barn immediately after. Others cut earlier, and often put it into the barn or sack before it has had time to cure. I have no doubt, if the wheat is intended for seed, though the sample will be quite rough and will not look so nice, it is better to let it get quite hard previous to cutting; but for grinding, and to make sure of a fine sample for sale, this is a mistake. When secured in this hard state, and through being so long exposed to the sun before cutting, it is impossible for the miller to separate the bran from the flour so thoroughly; consequently the flour is coarse and brown. Also, when cut so late, if there is much to handle, considerable will be lost before the flour is secured.

For several reasons it is desirable to cut wheat in a soft state. If the berry is past the milky state, and when like soft dough, it is as good a time as can be. I have known large wheat raisers to cut it very green. The color is brighter, the berry more plump, the quality richer, the straw softer and tougher—not so liable to break up when threshed—all of which is very desirable. It is a settled question that more and better flour can be made from this wheat. Of course, to cut in this green or soft state, more time is required to cure before hauling. Many object to this on account of rain, and anxious to barn the grain immediately after cutting. We know it is not pleasant to have rain day after day on wheat if not properly set up in shock.

My custom is to cut when in the doughy state, make good sized bundles, set them up well—six bands upright and two to cross with, making eight altogether; let them stand till the wheat is hard enough to grind. The wheat will not be injured by moderate rains, and the heads not being much exposed to the sun will not be injured by drying too quickly. I am in no hurry to haul the wheat if other work is pressing. I have found all through 35 years' experience that it is best to cut early and give sufficient field room. Most of the moisture is caused by being put together too soon after cutting, even if the wheat and straw seem quite dry. Too many of our farmers raise green weeds with their crops, and these, getting mixed up with the wheat, cause it to heat and mould in the mow or stack. *Ohio Farmer.*

## Covering Manure.

It is remarkable that more attention is not given to the subject of covering manure from the weather, and especially from too much rain. Those who have given the matter particular attention have found that manure so protected is worth double that which is left out in the open air. Two loads for one is a profit few farmers can afford to lose. There is no question which vitally concerns the farmer in this time of manure. Much that he does has reference to it. Straw is not to be sold because it makes manure. Stock is fed through the winter for the express purpose of manure-making. Articles which scarcely pay to send to market are nevertheless taken to the city in order that manure may be brought back as a return load; and yet the whole of the manure made remains all the season exposed to the sun, wind and rain until it is diminished one-half in value. The trouble is probably that few really believe that exposed manure undergo this loss. But the matter has been too thoroughly tested to admit of a doubt. We know first-class farmers who did not themselves believe it, until by actual experiment they found out its truth. In arranging farm buildings it will pay well to look as much to the preservation of the manure as to the hay or grain; and those who have their buildings already finished without these manure arrangements will find that twenty five or fifty dollars spent on boards for a covered shed will rank among the best investments ever made. *American Stock Journal.*

## THE SHOOTING OF AN OFFICER OF THE HUNTINGDON VOLUNTEERS.

The *Huntingdon Advertiser* states that the condition of Capt. McKinnon, who was shot on the landing of the Huntingdon Borderers at Port Lewis, on his return from Montreal, Saturday last, has become somewhat dangerous, and that "the accident appears to have resulted from carelessness." The Dominion states the circumstances of the case as follows: Captain McKinnon of the Dundee Company had just gone ashore, and at a short distance in advance of him, Private Kelly, of No. 7 Company, was standing behind a wagon, when he fired without apparently taking aim, or raising his gun to his

shoulder. The ball grazed the breast of Capt. McKinnon, making a flesh wound not considered dangerous; it then penetrated one of the Captain's arms, entering about the elbow and coming out a little below it, leaving the bones shattered and all the arteries severed. Dr. Cameron, of Huntingdon, assistant surgeon of the Battalion, fortunately was on board, and was immediately informed. He had not his surgical instruments with him, but made every effort to stay the blood which was oozing from the wound. The St. Anne's doctors were instantly sent for, it being then 9 o'clock p.m. It was necessary that the arm should be amputated, but it appears they had not the proper instruments. Dr. Gilles, of Fort Covington, was telegraphed for. He arrived at 1.30 a.m., and the arm was amputated.

A few weeks ago Collector Arthur, of New York, killed seven salmon, one of which when landed weighed fifty pounds, and was the largest ever killed in the Grand Caspasia River with a fly. He was taken about 7 p.m. with a single-rod leader and a "silver doctor" fly in twenty minutes, and had to be gaffed by two canoe-men in order to get him into the boat. The seven fish taken on Saturday week by the Collector ran as follows: 20, 38, 35, 29, 27, 25 and 24 pounds, and as Mr. Dunn has had nearly as good luck, the Caspasia may be safely set down as a good river.

A serious riot occurred on Sunday night in Portadown, Ulster, Ireland, between Orangemen and Catholics, and the disturbances still continue. The Orangemen attacked a Catholic church, and the Catholics, in turn, attacking the church in return. Weapons of all kinds were used, and many of the Catholics were badly injured. The police were nearly overpowered before the mob was dispersed.

A prize fight for \$5,000 a side between Johnny Dwyer, of Brooklyn, and Ryan, of Troy, which was to have come off on the 16th, is postponed until Aug. 9th.

## FURNITURE FACTORY.

THE Subscribers have commenced business in the building adjoining the Methodist Church, and are prepared to make up

## FURNITURE IN ANY STYLE.

and in a prompt and satisfactory manner.

## TURNING OF ALL KINDS.

Wooden Pumps made to order, and Pumps of all kinds repaired.

## Furniture Cleaned &amp; Repaired.

R. G. ANDERSON & SONS.

Newcastle, Dec. 4, 1877.

## PARKS' COTTON YARNS.

Awarded the Only Medal Given at the Centennial Exhibition.

For Cotton Yarns of Canadian Manufacture.

Nos. 5's to 10's.

WHITE, BLUE, RED, ORANGE AND GREEN.

Made of Good American Cotton with great care and uniformly of the highest quality.

Full Length and Weight.

WE would ask the purchasers of Cotton Yarn to remember that our Yarn is made from the best of cotton, and is a stronger yarn than the King Frames, used in making American yarn.

It is also better made and more carefully reeled; each hank being tied up in 7 lbs. of 120 yards each. This makes it much more easy to wind than when it is reeled without the American 14—and also saves a great deal of waste.

These yarns are made with weaving in mind, and the great advantage it is to them to use yarn put up in this manner.

## LUTON CARPET WARP.

Made of No. 10 Yarn, 4-Ply Twisted.

WHITE, RED, BROWN, SLATE, &c.

All fast colors.

Each 5 lb. bundle contains 10,000 yards in length and will make a length of Carpet proportion to the number of ends in width.

We have more twist in this warp than it formerly had, and it will now make a more durable Carpet than can be made with any other material. Since its introduction by us, a few years ago, it has come into very general use throughout the country.

All our goods have our name and address upon them. None other are genuine.

## W. M. PARKS &amp; SON.

New Brunswick COTTON MILLS, 35-36 ST. JOHN, N.B.

CHATHAM, MAY 27, 1878.

THE Subscriber begs to intimate that he has removed into his New Premises,

## THE "ARGYLE HOUSE,"

(nearly opposite his old stand) and has completed his importations for the season. The stock in every Department is large and well assorted and will be sold LOW. He would call special attention to our
