# Marion Harland's Page

Almost too Hot to Handle.

In my youth and at the South, it was known familiarly as a "Molasses Stew"-

sometimes as a "Sugar Stew." It was a popular form of entertainment on winter evenings, and divided the honors at "Halloween" with snapdragon and the dozen charms practiced in order to get a peep into the future we had not then learned is lovingly veiled from If the answer be affirmative, the our presumptuous eyes.

### HOMEMADE SWEETS

I do not know that confectioners were more honest then than now, but they were more simple concerning that which is evil. In unbiblical language, they were not "up" in the matter of adulterations of their wares. Alba terra had no marketable value, and candy-makers neither poisoned nor painted the "goodies" that had children for their chief customers.

The subject of this Talk with the Housemother was suggested to me by the sight of a "scare head"

"WHOLE FAMILY POISONED BY CANDY BOUGHT OF A RE-PUTABLE CONFECTIONER!"

It was not cheap candy, I learn from perusal of the story, but put up in pretty boxes, and colored at-tectively. Retail price—40 cents a pound. The father bought it on his way home from work, and he, the mother and the three children ate the whole pound before bedtime, with the exception of a few bits left in the bottom of the box. These, when analyzed by the doctors, whose united skill saved the lives of the sufferers, were adjudged to contain arsenical green and other deadly

For many years the purchase of heap candies has been sternly pro-nibited in the several households in which my word has the weight of lewful authority. Chocolate, which more than suspected to be half merican mud; lemon drops, so ir as to cut the throat of the inint that swallowed them, demontrating to the initiated the active resence of sulphuric acid; green, and sellow sticks and cubes

HAT is what they call it now- that owed brilliancy to mineral dyes; brandy drops, sticky and cloying, redeemed from insipidity by alcohol-one and all of these fruits of juvenile speculations with pocketmoney and windfalls of penniesare ruthlessly confiscated and burned in the market place-alias, Grandmamma's wood-fire, or the kitchen range. If a child fall ill suddenly of indigestion, the first query is-"Have you eaten shop candy?"

> case is treated as one of poisoning. This is not an idle tale, or an exaggeration of facts. I could make yet stronger the appeal to mothers to withhold hurtful sweets from their darlings were I to tell all I know of the infamous cheats foisted upon us by men who, after all, are no worse than their fellow money-makers.

> These things being true, why do we not make our candies as well as can our fruit and vegetables? And this last is what we must do if we would not be done slowly to death by salicylic acid and more potent

> Pulling candy on a frosty evening, when a boy or two, and a girl or three, have dropped in, may be puerile amusement in the sight of sophisticated younglings of the human species. I submit that it is better exercise for the moral muscles, as it assuredly is for the physical, than waltzing and "bridge."

### CLEANING THE KETTLE

Now, as to the modus operandi of the family and social entertainment: Cover the aning table with clean white cloth, and set on this four large platters, and a large plate for each pair of "pullers." Platters and plates are well-buttered, and saucers of cornstarch and pats of butter stand conveniently near the platters. The candy is cooked in the kitchen. If Bridget resent the invasion of her domain when an "acquaintance" may be with her, choose her "evening out" for the frolic. "Our" cooks have been uniformly tolerant of candy pulls, for we give them no additional trouble in the way of cleaning kettles and plates next day. As soon as the k ttle is emptied it is filled

with hot water and set on the side of the range to soak itself clean by the time the fun is over. The plates are piled in the sink, soaped, and covered with hot water when they

To return to our candy! For a "molasses stew," put into the kettle ingredients in the following pro-

#### portions: FOR "MOLASSES STEW"

To one quart of the best quality of molasses allow one cup of granulated sugar, a great spoonful of butter and half a cup of vinegar. Dissolve the sugar in the vinegar, mix with the molasses, and cook-slowly at first-until the mixture hardens when dropped into water. At this point stir in the butter, and when this is melted a teaspoonful of soda, dissolved in a little hot water. The boiling mixture will foam up furiously, so be on your guard against spatters of hot syrup. As soon as the effervescing ceases, take the kettle from the fire and empty into the buttered platters, dividing

the contents equally between them. Now, let the pullers gird them for the work by donning big white aprons, turning back sleeves, removing cuffs, and buttering the tips of the fingers. The adroit candymaker never touches the hot mass except with dainty finger-tips. It is a sign of awkwardness or ignorance if any other part of the hand is sticky.

The hot mass must be taken from the platter as soon as it can be handled. The butter will keep it from adhering to the sensitive skin. and a little fortitude enables one to bear the heat in consideration of the fact that the hotter it is when drawn out into a rope, the better the chance of working it speedily into excellent candy. If left to cool until tolerable to the touch, it will string, and give no end of annoyance. Let the practiced puller—who is almost surely a woman—manipulate the hot lump alone for a minute to get it into working order. When she can draw it into a thick rope, her partner must come to her help by grasping the other end of it. Henceforward the business is play, and graceful play. The fast-

whitening rope is drawn out as far as may be without danger of parting, caught dexterously in the middle, first by one, then by another of the pullers, turned back upon itself to double its thickness, then drawn out again. The process, often and yellow candy to cream white, if it color, and delicious to the taste. is not allowed to cool too suddenly. In hardening it opposes more resistance to the arms and hands, un-

and grace come into play. It will be so brittle, by and by,

and strength. Here is where skill

for Molasses Balls

the platter, not when suspended in the air. Divide into three strands of equal length, and plait them evenly and fast. Set the platter in a cold place for a few minutes before breaking the candy into lengths. If properly cooked and pulled, it swiftly repeated, bleaches the dark will be light, porous, of a pale straw

What is sold in the shops as "oldtil the strain is a test of agility fashioned molasses candy" is too often doctored with chemicals, and thickened with flour. The cornstarch of which mention was made just that further pulling would snap the now is for the benefit of luckless rope. Now, lay it carefully on the pullers whose fingers have got platter, coiling as you let it down. sticky. A touch of the starch is If you wish to braid it, do it on safer than rebuttering. Too much

into strings.

Peanut

Sugar candy is made thus: To two large cups of granulated sugar allow half a cup of water. Do not stir it, but set over the fire to heat slowly while dissolving. When you have a clear liquid, dissolve a bit of cream-of-tartar not bigger than a water, and pour into the sugared holy combinations of white and colwater, shaking the saucepan to induce mixing. Cook steadily until a froth-sold under the name of teaspoonful, poured slowly from the tip of the spoon into cold water, hardens and threads in the air. Proceed then as with the mo- column.

Brittle

lasses candy. Home-made candies, packed into paper-lined boxes, will keep for

butter will cause the rope to split weeks. If the sugar be stirred at any stage of the process, it will soon granulate.

The above are warranted (truthfully) pure candies, that cannot hurt any healthy child. The taste for what English children call "sweeties" is normal and right. When founded upon wholesome doored earths, false essences, and "French bon bons."

Recipes for various home-made candies will be found in another

## THE HOUSEMOTHERS' EXCHANGE

OUR friendly Talks embolden me to ask a question that weighs upon the mind of this one of your readers, and probably perplexes some others.

Do you know of any book or periodical that tells what vegetables, fruits and meats should be used together, to give what I should call "a balanced ration," and the reasons for eating them at one and the same meal? reasons for eating them at one and the same meal?

I do not ask this with the desire to follow any "fad," but to try to get the best and most helpful results from money spent for food and labor expended in the preparation of meals.

Let me illustrate: A meal to which I sat down lately consisted of beefsteak, mashed potatoes, maccaroni and corn starch pudding. The hostess remarked to an invited guest to whom she wished to pay especial honor:

"I know that you like them all, and had these dishes prepared expressly to please you."

That her lumbers meaned the starch with

these dishes prepared expressly to please you."

That her luncheon was all starch with the exception of the meat never occurred to her as an objection to the menu. I felt that it was wrong without being able to formulate my belief.

If you can take time to answer me by mail, please do it. If not, won't you say something in the Exchange on what seems to me an important matter to such of us as would like to feed our families (and, incidentally, ourselves) intelligently?

K. N. (Boston, Mass.).

This letter has set a-going a train of thought which cannot find expression in a private communication to a single individual.

in a private communication to a single individual.

"K. N." has worded a query that comes daily to the mind of the household caterer. I never order a meal without thinking, and often saying, "What will go well with this or that main dish?"—the "piece de resistance," as the French have taught us to name it. Instinctively, I condemn the combination of beef and two or three starchy vegetables, such as our intelligent correspondent enumerates. Re-

it. Instinctively, I condemn the combination of beef and two or three starchy vegetables, such as our intelligent correspondent enumerates. Reflection assures me of the justice, upon hygienic principles, of the instinctive revulsion. Beef is a "red meat," a heavy meat—nutritious, it is true, when properly masticated, but fatty in part—and demanding condiments in the form of horse-radish, mustard, pickles, etc., to make it go down palatably and rest easily on the stomach when down. In other words, we demand vegetable acids to help on the assimilation of suct and fibres.

While I do not know that any book or magazine has been published that deals with this subject, it is true that convention—which is an interchangeable term with fashion—has settled many of the mooted branches of this, as of many another difficult matter. An astonishing percentage of conventionalities will be found, upon examination, to be rooted and grounded in common sense.

It is not an arbitrary and irrational rule, then, which ordains that delicate green peas and currant jelly shall accompany roast lamb. The dictate of mint sauce in the same connection is based upon something which approximates natural selection. Green peas and apple sauce go as naturally with duck as apple sauce with pork; turnips with boiled mutton; sweet potatoes with roast beef, and boiled rice with fricasseed chicken. We serve cucumber sauce with shad, pass sliced lemon with soft shell crabs, and garnish brolled chicken with fried hominy, from the force of habit—or so we imagine. If interrogated as to any deeper reason for the habit, we fall back upon custom. Somebody set the fashion in culinary "frills" long ago, and one must be in the fashion in table appointments or be considered antiquated. Nobody who is anybody would think of serving venison without currant jelly. That custom has the favor of antiquity. The careless talker

and superficial thinker never asks herself why the fashion was made in the first place, nor why everybody follows it slavishly—in the popular opinion. Epicures made a study of culinary affinities in days gone by, and we have entered into their labors—ignorantly, perhaps, but to our advantage.

Now and then somebody awakens to the consciousness that there must be reason back of action, and questions why these things are.

reason back of action, and questions why these things are.

Writers on dietetics explain that green esculents should enter into every meal in which meat or oil in any form plays a part. From them, too, we learn why the healthy system craves sweets after dinner, the acid to which sugars change in the process of digestion, correcting the grossness of fats. We comprehend, too, why buckwheat cakes and the like the grossness of fats. We comprehend, too, why buckwheat cakes and the like heat-making foods are wholesome in winter, and unwholesome in summer; also why they are more easily digested if the longing to coat them with molasses be gratified. The syrup is a beneficial agent in the business of converting the homely, hot and "hearty" favorite of the farmhouse kitchen into brawn and blood.

The theme is interesting and practi-

brawn and blood.

The theme is interesting and practically inexhaustible. It is one that commends itself with peculiar force to the housemother who would feed her brood with food convenient for it, in the deepest sense of the word.

## The Dried Flour Ball

If "Eva," the young mother, who asked you for advice some time ago, will try the following remedy, I think she will soon see that her baby will derive much benefit from it. I know it proved abundantly successful in my own child's case many years ago:

Tie several spoonfuls of flour up in a piece of muslin, or linen; put it into a saucepan of boiling water and let it cook for three or four hours, according to the quantity of flour, until it becomes a solid mass. She will now have a hard white ball. Let her turn it out of the bag, and leave it in the sun all day. It may be dried in the oven if the need of the little one be urgent. When cold and perfectly dry, she should scrape enough at each time of feeding to make a sort of gruel with water, or milk and water. Her baby can readily digest this food, especially as he is twelve months old. Mine was only a few weeks old and it was perfectly assimilated.

months old. Mine was perfectly assimilated.

ANOTHER MOTHER (Ohio). ANOTHER MOTHER (Ohio).

ANOTHER MOTHER (Ohio).

Thirty-odd years ago, when my little ones were in the nursery, the subject to the dangers of teething and second summers, a kind friend, the wife of our family physician, dictated the formula of the "dried flour ball" to me, and I wrote it down as it came from her gentle lips. She had used it with each of her nine children, and believed it to be original with herself. After testing the efficacy of the simple remedy to my own satisfaction, I incorporated it into a section of my first household manual, under the heading: "Dried Flour for Teething Children."

Scores of letters from grateful mothers have told how widely the good news has spread. I am quite certain that the mother who recommends the recipe to her sister got it indirectly from my dear old mentor. I thank her for reminding me of it, and thus setting the admirable "simple" before our members. I have said how coulially and unhesitatingly I can indorse all she says in praise of it.

Ridding Fat of Salt

hear from her?
Mrs. C. R. S. (Poland, N. Y.). You do not give your full address, Should "Mrs. H. E. S." wish to communicate with you, will that you append to your letter be sufficient?

Recipe Asked For Can you give me the recipe for Lady Baltimore cake? It was published in your paper some time ago, but I failed to keep it, and now I want it. I inclose stamp for reply.

B. S. (Chicago). reply.

B. S. (Chicago).

The recipe did not appear in our Ex-

change, I think. In any case it will be sent in by some compassionate reader, and you shall have it. Be patient, recollecting how many "wants" we have and lecting how many how little space.

### HALLOWEEN DREAMING.

GIRL who wants to dream of her future husband should eat a hard-A boiled egg, without any salt, just at midnight on Halloween. She must not speak a word to any one after. she has finished eating, and must go to bed and to sleep without breaking the silence. She will surely see the desired face in her dreams, says the cld superstition, but the charm is made more certain if she places her shoes beside her bed in the shape of a T.

## Recipes for Domestic Candies

IX in a saucepan three cupfuls of coffee sugar, a cupful of boiling water, and one of the best quality of molasses. Set over the fire and bring to a boil. Add, then, a half-teaspoonful of cream-of-tartar, stirred in well. Cook steadily until the syrup hardens in cold water, when stir in a half cupful of butter and as much soda as will lie on a dime. Take at once from the fire when it boils up, after the effervescing is over, add any essence you like, and pull into light, yellow ropes. Lay these on a floured board, and cut into lengths of an inch and a half. Wrap in squares of buttered paper. They will be far superior in flavor to those sold in the shops under the same name. IX in a saucepan three cupfuls

### Maple Fudge.

Crush a pound of maple sugar fine with a rolling pin. Pour upon it a pint of hot milk, into which you have put a pinch of baking soda. Let the sugar melt slowly over the fire, and then bring to a fast boil. When the syrup threads from the tip of a spoon, stir in a tablespoonful of butter. When it reaches the boil again, pour into buttered pans, and cut into squares as it hardens.

Chocolate Fudge.

To three cupfuls of coffee sugar add a half pound of grated chocolate (best quality and unsweetened). Stir until thoroughly mixed, when wet with a half cupful of sweet cream; beat to a smooth paste, adding, as you go on, two tablespoonfuls of warmed butter. This done, put the mixture into a porcelain-lined kettle, and set it where it will melt very slowly. It should not reach the boil under two hours. At the end of that time, increase the heat, and boil fast for ten minutes, or until a teaspoonful "balis" if you manipulate it. Stir into the candy two tablespoonfuls of vanilla, and pour into buttered pans with straight sides. While still rather soft, mark into squares. To three cupfuls of coffee sugar add

Vanilla Caramels.

Wet two cupfuls of granulated sugar with half a cupful of milk. When it has dissolved, add a quarter teaspoonful of cream-of-tartar and set it at the side of the range until very hot, when draw to the front, and stir to z boil. Stir for ten minutes, or until a little dropped into cold water forms into a soft mass. Add a dessert-spoonful of vanilla, pour into a bread

bowl and let it cool until you can handle it easily. Now beat with a flat spoon to a sort of doughy paste. Knead this, as you would bread, upon a board strewed with sugar, and roll into a sheet less than half an inch thick. Cut into squares.

### Plain Fudge.

Dissolve two pounds of brown sugar, in a pint of milk. Add a pinch of soda, to prevent curdling, and cook in a porce-lain-lined saucepan until a bit dropped into cold water hardens into a brittle mass. Pour into a buttered pan with straight sides, and as it cools, cut into small squares with a wet knife.

Hoarhound Candy for Coughs. This is best made from the frest herb, but as coughs and sore throats do most abound in winter, I give a recipe in which the dried leaves are used. Steep a double handful of the leaves Steep a double handful of the leaves of boiling water for an hour. Set the vessel containing the infusion in hot water, not letting it boil. Strain and press the leaves dry. Pour the teaupon three cupfuls of coffee sugar and set over the fire as soon as the sugar is dissolved. Add then a tablespoonful of vinegar and cook steadily until the candy breaks when dropped into cold water. Pour into a buttered pan and cut into caramels or pull into ropes.

Peanut Brittle. Wet three cupfuls of granulated sugar with a scant cupful of boiling water. Let it melt over a slow fire. Cook gently, without stirring, until a little gently, without stirring, until a little dropped into cold water hardens quickly. Add a cupful of roasted shelled and skinned peanuts, with as little use of the spoon as may be; turn the mixture into buttered pans and out up while hot. the mixture into buttered pans and cut up while hot.

The brittleness of the candy depends much upon the scant use of the spoon.

To stir sugar candy is to invite grand

APPLE SEED CHARM. F YOU want to find out which of your admirers is the true one, save the seeds of the apple you have eaten on Halloween, name them and place one on each eyelid, letting it remain until it falls off on its own ccount. The seed that sticks the long or represents the lover who is to be relied, upon.
