CAMBRIDGE, Dec. 6, 1858. · · · I beg to add My Dear Leconte: 1 beg to add a word with regard to Dr. Hayes' expedition. I consider it as highly important, not only in a scientific point of view, but particularly so for the interest of the whale fisheries. The organization ber within three months from the present date, and her within three months from the present date, and her within three months from the present date, and interest of the whale fisheries. Exception open sea in the Arctic. The whales being, warm blooded, air-breathing animals, must come to the surface to breathe. They cannot live without it. Now it is well known that during the winter they are not found outside-that is to the south of the icebelt of the Arctic seas. They retreat Northward during the cold season, and if the whole expanse of that Arctic sea was covered with ice, they would necessarily perish during the long winter. I do not know a more direct evidence of the presence of extensive open water in the northern most regions of the globe, than the mode whale-fishing possible during the winter, would together with a general assortment of Groce be one of the most important results for the improvement of whale-fishing. The assortment of articles as are usually to be had in such estab provement of whale-fishing. The argument may not strike forcibly one who is not acquainted with ket prices. the structure of the whales, but to a phisiologist it must be irresistable.

Very truly your friend, L. AGASSIZ Dr. John L. Leconte, Philadelphia.
