LEPERS WILL REMAIN
ON DARCY ISLANDStatement by Hon. W. Templeman--Govern-
ment Is Carrying Out Scheme of Wire-
less Telegraphy on This Coast.

(From Friday's Daily.)

The representative of this province in the Dominion cabinet, Hon. W. Templeman, minister of inland revenue, returned last evening after an absence of eight months at the capital. He intended coming west some time before, but had to postpone his trip to attend a special meeting of the cabinet which recalled all the ministers to the seat of government, with the exception of Hon. Mr. Oliver, who is in England.

Interviewed by a representative of the Times, the minister said that while on duty in London, which the public have manifested particular interest in, he had been engaged in the construction of the Pacific in accordance with the terms of the contract, which required completion by 1911. "What is there to announce relative to the Pacific in accordance with the terms of the contract," Hon. Mr. Templeman was asked. "There is no doubt," he replied, "that the necessary aid to navigation and protection for human life on the west coast of Vancouver Island and the coast line of British Columbia generally will be provided by the minister of marine and fisheries as rapidly as possible. A number have already been constructed and I know that three or four more on the northern route were authorized a few days before I left Ottawa. The system of wireless telegraphy as already promised will be established and connection provided between Victoria and Vancouver and various points along the coast. The minister of marine and fisheries is giving this matter his earnest attention and has recently placed in charge of the department a competent man who has given his personal attention to the inauguration of the system in British Columbia. There are many difficulties to be overcome and many things to be taken into consideration before the project is made, but these matters are nearly all adjusted now, I think, and there should not be much further delay in establishing the stations."

"The rumor of a proposed change in the location of the lazaretto has excited considerable comment," the reporter remarked. "There has been no such change of plan," Hon. Mr. Templeman replied. "The best plans of superintending the lazaretto in order that the unfortunate lepers who are brought to receive better care and attendance were discussed by the officials of the department, and the idea of using Alberk Head because of its convenient proximity to the city was suggested. Dr. Watty, quarantine superintendent, is stationed there. The doctor will have supervision over the lepers and the idea that they be brought near the city is not a good one. Alberk Head as a location. But there never was any decision to remove them from Darcy Island, and they will not be removed therefrom. This island was secured from the local government for use as a lazaretto more than a year ago, and except for the inconvenience and slight additional cost of visitation can be conducted as cheaply as elsewhere. Being isolated, it is much better adapted for the purpose. Dr. Montzambert, in whose department these matters are, will be in Victoria in a few weeks, and will determine what change should be made on the island. He will be accompanied by Dr. Watty, the unfortunate lepers where they are. In my opinion, Chinese so afflicted should be returned to China, and if

should be appointed to reside in the city mentioned to act in conjunction with the public health authorities there. He could examine intending emigrants before they left England and prevent the trouble which now arises from necessary deportation after arrival. I hope and believe the suggestion will be carried out."

And then Dr. Groves plunged into the question of tuberculosis, which he has studied in England and is now carefully thought evolved a new and interesting method of dealing with this important matter.

"Looking at the matter from a state medical point of view," he said, "the problem of tuberculosis is necessary because it is an evil to society. The individuals make up the state and from a humane being the individual must therefore receive the most careful consideration. But in order that the state may benefit, we must get every individual suffering from phthisis and teach him how to live in order that he may get well. We must also show him how to avoid infecting others."

"As yet we have only been building many expensive hospitals in which consumptives are treated, but we have scarcely touched the fringe of people suffering, and from the point of view of the state have done practically nothing. In Canada, the consumptive people have to pay so much a week. One of the most important of these, the National Hospital for Consumptives, is in my district at St. Lawrence, near Ventnor. There is no doubt that the state should pay for the consumptive people."

"The suggestion is that in every district the smaller and better buildings of wood or canvas erections to which every case of phthisis would go to be taught how to live and how to avoid infecting others. A man working for his living in the city at night, if he were too ill to work he might remain there during the night. In fact, teaching should be brought to the door of every person suffering from tuberculosis."

"One of the most important factors of residence in these places of tuition,

and of course of treatment, is that the patients become missionaries to the community. They know something that others do not and consequently are rather proud of their knowledge. They spread information on hygiene right and left. They teach people that fresh air is of the utmost importance; that windows should be open at night as well as by day, and in a variety of ways are useful in improving the standard of hygienic conditions."

"While it may be necessary to have large institutions for persons suffering incurably from tuberculosis, yet it must not be lost sight of that when they are likely to die their families wish to have them to nurse and the sufferers wish to be with those nearest and dearest to them. It seems very desirable, therefore, that we have hospitals or large institutions for this class of treatment, but the fact should not be lost sight of that we are doing practically nothing to help the white man's scourge. Inexpensive buildings of the character I suggest could be in every city. Teaching is as valuable as treatment in stamping out phthisis."

"On the question of public water supply we had an interesting session. We told the people of the Dominion that it was impossible for Canada to do without a water supply."

"The question of public water supply we had an interesting session. We told the people of the Dominion that it was impossible for Canada to do without a water supply."
