### EARN THAT BIG SALARY. LEARN RAILROADING.

GET OUT YOUR LEAD PENCIL AND DO A LITTLE FIGURING

Whatever your present monthly salary may be, multiply it by 12, and find your yearly income. Will it amount to \$1,699.80, the salary show above. Do you earn one-half that amount? If not, why not?

FIREMEN AND BRAKEMEN Earn from \$75 to

\$150 per month. With the rapid progress of railway building in Canada it takes only from two to three years to be ad-vanced to engineer or conductor, whose from \$90 to

\$ 141

menth.

We teach and qualify you by mail in from 8 to 14 weeks without loss of time from your present of the present work. Positions are secured; in fact, there are many openings right now if you were dependent of the present work. Positions are secured; in fact, there are many openings right now if you were dependent of the present o

Our free booklet tells all about our system of teaching. When writing, state age, weight and height. Address :

THE COMINION RAILWAY SCHOOL. Dept. R Winnipeg, Canada.

## How to Whitewash Stables

In these days of increased vigilance on the part of local sanitary authorities, the dairy farmer finds that more and more time and labor has to be expended in complying with their demands. The farmer, who is relatively least affected by these demands is the one who is in a position to carry them out expeditiously.

them on acceptance of the provided most acceptance. The operations of the impector is whitewashing. Even in the impector is whitewashing. Even in the provided control of the impector is the impector in the

special attention has been paid to lighting the building from the sides and ends as well as from above.

In the north-east corner on from the norm-east corner on the ground floor a room 61 feet by 54 feet has been partitioned off for the dairy cattle. The equipment of the dairy statle should be studied by all who are interested in sta<sup>1,3</sup>; construcwho are interested in sta<sup>32</sup> construc-tion. There are concrete sloors, man-gers and gutters, iron piping parti-tions between the cows and patent stanchions, litter and feed carriers and an approved system of venti-lation. The balance of the ground floor, except the space occupied by the judging ring, is given over to the stabling for the horses. There are three rows of 36 stalls each and in the stable formerly was there are 49 stalls.

brushing down and covering with one coat, about five cents a square yard.

With a machine, it is possible to cover quite 10 times the area covered will be seating for about 1,000 people.

On the second floor of the new build-

The Guelph Winter Fair, with its enlarged and improved accommodation and with a horse department added to the exhibit, will prove to be more popular than ver. It will repay a visit on the part of those who attend.

are used to the machine, even more may be accomplished.

Time is lost by the spraying-jet, getting obstructed, but the frequency of this happening will be lessened by attention to the following points:—

(1) Choose a machine fitted with a nozzle that can be easily cleared, (2) Slake the lime carefully, and pass it through the strainer provided with most machines. (3) Use only fresh lime. Lime that has been exposed to the atmosphere for some time contains lumps of calcium carbonate, or to the atmosphere for some time con-tains lumps of calcium carbonate, or chalk. Aid the slaking by crushing the lime. The liquid used must be of a creany consistency, about two lbs. of lime to a gallon being normally re-quired. Ihe addition of a little blue will make the wash a purer white, and whiting added at the rate of one lb. a gallon will improve the consistency.

## The New Winter Fair Building

The new building at Guelph for the Ontario Provincial Winter Fair, as Ontario Provincial Winter Fair, as will be seen by the accompanying il-lustration, is of imposing appearance with its massive walls and towers. It occupies a part of what was formerly the old open market square immedi-ately adjoining the old building and a few feet to the east of the City Hall

Hall.

The building is 200 feet in length by 113 feet in width and is two stories in height except for a space 170 feet by 43 feet next to the old building which will be used as a judging ring for horses and beef cattle and which will be without a second foor so that the immense sky-lights will be effections. the immense saying and be determined in the central parts of both new and old buildings. The walls are of cut limestone placed upon a solid foundation of concrete. It will be noted that

pages do not occur, and the operators are used to the machine, oven more may be accomplished.

Time is lost by the spraying-jet, provided between the new and old getting obstructed, but the frequency

### Dairy Meeting at Lindsay

The Lindsay district dairy meeting held on Thursday last, not unlike the meeting held at Peterborough on the day previous, lacked only in attendday previous, lacked only in attendance. A very strong program had been arranged. The speakers were Goo. H. Barr, Chief of the Dairy Division, Ottawa, J. F. Singleton, Creamery Instructor, Henry Glendining, Instructor Cameron of the Lindsay group and W. Newman of Lornstrate, and W. Newman of Lornstrate, which was the same of the county with the county of the county of the county with the county of the cou the chair. Mr. Henry Glendinning was re-elected to represent the district on the directorate of the Eastern Ontario Dairymen's Association. LESS WORK AND BETTER MILK

Mr. Barr gave his celebrated lec-ture on "The Care of Milk for Cheese Factories," illustrated by lantern sides. A noteworthy feature of Mr. Barr's advice re care of milk, and one which should appeal to all farmers, is that he tells them to do less work. Mr. Barr, having been brought up on a farm, knows that the farmer has little time to waste and that the less work one can expend on the ing for milk and have it right, better. The method he advocates been proved by actual practice to quire very little work or trouble where it is followed, the milk will be delivered in the very best condi-tion. The method advocated as many (Continued on page 12)
