Ensilage and Straw Cutter

Our "B" machine, built especially for the farmer. A combination machine—it will cut and deliver green corn into the highest silo or dry straw or hay into the mow. 12-inch throat, rolls raise 6 inches and set close to knives—solid, compact cutting surface. Can change cut without stopping. Can be reversed instantly. Direct automatic delivery. Knife wheel carries face. No lodging, everything cut, wheel always in balance. Steel too can.

Made in two sizes—mounted or unmounted. We also make large type machines for custom work. Ask your dealer about this well known machine and write us for new catalog showing all styles.

"Metallic" Corrugated Iron Barns are Lightning, Fire, and Weather-Proof

Lumber and labor are too expensive to be used in farm buildings; besides, wood buildings are easily destroyed by fire and lightning. "Metallic" Corrugated Iron makes buildings that last a life-time; that are warm and dry, and proof against fire, lightning and weather.

Costs Less Than Lumber

You save money on labor and lumber when you use "Metallic" Corrugated Iron. Write for complete information before you buy any building material. We can save you money. Our corrugated iron is made in galvanized or painted sheets, straight or curved.

Orchard and Garden Notes

The latter part of August is a good time to set out fruit.

Melons should soon be ripe. Have you a good planting in the garden?

Many of the perennials, as well as the annuals, are at their best during August.

These are the days that are demonstrating the value of early spraying of fruit plants.

Clear up the greenhouse and get fresh soil ready for a new crop of plants this winter.

Many of our shrubs and trees will soon begin to put on their fall colors. A variety of these shrubs about the place is interesting.

Stop cultivation in the orchard and seed to a cover crop. Late cultivation encourages late growth, which is objectionable.

Early celery will soon be ready to blanch for market. Paper or boards are usually best to use, as they are not so likely to cause decay in warm weather as is dirt.

This is the time of year when the well-cared-for garden is reducing the table expenses greatly, besides giving a fine variety of food.

Order tulip, hyacinth, and other winter and spring flowering bulbs. They do not need to be planted until the last of September or October.

Live Stock for Distribution

As the distribution of pure-bred stallions and bulls, 125 and 414 of which respectively have been located in different parts of the Dominion, has now been completed for the current year, it is announced that the Live Stock Branch of the Federal Department of Agriculture will undertake a further distribution of pure-bred rams and boars during the months of August, September, and October next, to associations of farmers organized in districts in which the services of satisfactory breeding animals in these classes are not already available. Applications for rams and boars, a large number of which have already been received, should be made at an early date, as it will not be possible to consider those that are not made prior to October 1st.

Farmers desiring to secure the services of such stock should arrange to organize an association in their district and forward their application to the Live Stock Commissioner, Department of Agriculture, Ottawa, from whom application blanks and all information with respect to the conditions under which pure-bred sires are distributed, may be obtained. It is understood that all applications will be reported upon by officers of the Live Stock Branch, and that favorable action as regards any application shall be subject to the approval of the Live Stock Commissioner. Letters addressed to the Department do not require postage.

How Will the War Affect Farm Prices?

(Continued from page 3)

men on the farms of Canada do not need to go to the front to serve their country well in this crisis. They can do it by working our farms to the limit here at home. That is our duty in the face of this terrible emergency.

It is well to be prepared for the future. "In times of war prepare for peace," is the best motto now. This war will consume wealth beyond the power of the mind to conceive. In its wake may follow a period of trade stagnation, money stringency, and hard times generally. This depression may extend to every corner of the earth. The farmer will suffer least of any, but he, too, will need to prepare, at least he can, for what may be inevitable.

War Will Help Canada

Sir William G. V. Horn, ex president of the C.P.R., on being asked what he thought of the war, made the following statement: "I do not imagine any harm can come to Canada, and the longer it continues the better it will be for the Dominion and the United States. Our crops of wheat, oats and corn will be sold at prices that will more than recompense us for any damage that may be done to make on behalf of our empire."

The Canadian Fruit Crop

The Dominion Fruit Commissioner in a crop report just issued, estimates the total crop at 77 per cent., an increase of 28 per cent. over the total crop of 1913. The crop promises to be clean. Pears will be slightly above a medium crop in Southern Ontario, and elsewhere practically a failure. Apples in Scotland and British Columbia are between medium and full. Plums will be hardly a medium crop in Ontario. British Columbia reports a full crop. Potatoes, in spite of heavy planting, have been so affected by dry weather that the crop will be little in excess of 1913. Grapes are exceptionally heavy in the Niagara peninsula.

Good Men Go West

The Province of Quebec has a valuable agriculturalist in Professor L. S. Klink, who resigned his position as Professor of Cereal Husbandry at Macdonald College on August 1, to become Dean of the Agricultural College of the University of British Columbia near Vancouver.

The Dairy Department of the Ontario Agricultural College has added a distinct loss on account of the resignation of Mr. J. M. Macdonald, many years Demonstrator in Cheese-making at the O. A. College. The financial allotments of a dairy business in Winnipeg were sufficient to overbalance the rather meagre salary paid for academic services.

The tin pal in the only one that has any right in the dairy. By means cut out the wooden ones.

In Sowing Your Fall Wheat

Indiana stands first in the United States in the production of Soft Winter Wheat. Indiana grows and sows more than 2,500,000 acres of wheat. The average yield in the State for the last ten years has been 13.3 per acre. The cost of producing an acre of wheat in Indiana is about \$12.00. An increase of 5 bushels in the average yield would mean an annual increase in the value of the crop of \$12,000,000.

"The average yield of wheat grown under ordinary farm conditions in the Indiana State Experimental Farm for the past twenty-five years has been 28 bushels per acre. Experiments in ten representative counties of the State has shown a gain due to fertilization of wheat of 11.6 bushels per acre. The average cost of bushels of fertilizer was \$3.67, leaving a net profit per acre of \$7.55.

"The Experimental Station believes that wheat sown in the fall, sowing a suitable variety of wheat, rotation of crops, fertilization of soil, treatment of the seed for diseases and the combating of insects will result in the total production of wheat being made."

GUNN'S SHUR-CROP FERTILIZER FOR FALL WHEAT or GUNN'S SHUR-CROP GENERAL FERTILIZER (on light soils) will make you money. Write GUNN LIMITED, WEST TORONTO, Fertilizer Dept., for free booklet.

Herds that A of Short

(Continued)
morning "I believe more good to be fed them, chop. I have indicated a and a neighbor the fence on the hardly a fly on vent right ahead let's cover some fighting lions."

A RIDE
Five years ago in the township of pioneer in silo corn. Will Tellord, who the road from his four years ago in silo and last year I drove in to have pioneer silo man. When I started to supplement the weeks ago, I had in my old silo. I had, when I had my sight known. We will have about bet, and at that rate the bulls' feeding silage. This feed had a day for feeding a little.

This old silo is a present foundation area at a cost of a little new silo was built and now made a present of \$50, including are able to build little cost by buying an exceptionally good, and doing so. We had no high prices. The silo and have what we call a 'man' in between, together alright. If anything, I think more than his brother standing almost eight weeks old. It is rigorous, not a sign of the dust and served by constant.

LOTS OF BROTHERS
These two brothers themselves independent, but have robbed of one of its worst of their neighbors. They are going to see the value of silos and lots of silo ro store it. As I drove many new silos that the last year or two. I have seen of corn followed the example and erected their Others, for instance on the Chemung of the local green last by the De last by the De have been told that were erected in the South in the one seas goes to show that farmers are learning most dependable of the best way in to-as ensilage.—F. F.

Increase Your Ensilage

Sow Rye and Vetch next year's corn and enough under in spring have bumper crops. City of home-grown in proper combination at \$1.85 per bushel in various directions given NIAGARA LAND AND LTD., NIAGARA-O
