best results, and it is little wonder that the Lenefits of the practice are not certain in the mind of those making such an application. 'That it pays to spray has been established. The smaller orchardists as well as the man of larger apple interests will reap results from spraying commensurate with the thoroughness and skill with which the spray mixture is applied.

Agriculture in the High Schools

I. F. Metcalfe, Dist. Rep. for Simcoe Co., Ont.

The idea at the bottom of this movement is that in the past the agricultural side of education has been sad-ly neglected—it might be said that the ly neglected—1 might be said that the whole trend of education has been away from the farm. At the present time we can see some of the bad re-sults of this policy. Our cities and towns are growing rapidly while our farms are being depleted of their pop-ulation—in other words, our mon-pro-ducing classes are increasing while our ducing casses are increasing while our [reeds and reeding, and many other producing classes are diminishing, subjects of interest with the inevitable result that the prices of foodstuffs are very high. This is the problem that the people living without gloves. It is printed upon

Studies in Horsebreeding

Studies in Horsebreeding "Studies in horse breeding!" is an illustrated treatize on the science and practice of horse breeding Ly G. L. Carlson. It embodies many points of vital interest to the breeder. A life and a fortune have been spent in the investigations, and the collection of data from which this book is written. Its scope includes such subjects as conception, or the origin of a life; the development of the footus and foetal development of the footus and foetal diversity of the science of the brood mare, with reference to her recurdity; barrenness and sterility, statistical; parturition; artificial in-menination; artificial conception, or the production of a foetus without the breed of breeding; the care of the breed of breeding; the care of the breed, their utility, feeundity and breed, their utility, feeundity and the breed ends, written from statistics; cross breeding; the phree-ology of the horse, a new subject; feeds and feeding, and many other subjects of interest

A Class in Agriculture Studying Drainage Problems

The illustration shows Mr. J. F. Metcalfe, the District representative of the On-tario Department of Agriculture, for Simcoe County, Ont, instructing a class in agriculture at the Collingrowd High School. This movement in agricultural ed-ucation has become most popular in the eleven counties now being served. We look forward to a rapid extension of the work.

Toward to a rapid oxtension of the work. In the cities and towns must face and in which they must give their assit-tance towards a solution. The farmer has also a problem to built is of a different nature. Hired help is extremely difficult obtain in most parts, and high prices must be paid for it. To be sure, high prices are obtained for what is solved off the farm, but the expresses of pri-ducing it is also high. To add to the difficulty, our lands have, in many wateful systems of farming that have the farmer's problem is indeed a difficult one, accentuated by the fact that it seems to be almost integrent farming by which a few app-cially trained men may manage that sort of thing, but general farming the an only be given by the man. He combining our small farms the combining our small farms the combining our small farms the parts of the practices of the small farm. He combining our small farms to have leaved the pracesses of pricesses of the stresses of the small farms the the sort of thing, but general farming the by the fact has or the small farms. He combining our small farms to have leaved from the sort of the sort of thing, but general farming the share the an only be given by the fact that is general farms which can only be given by the fact and grow in ever in the infect and grow in ever in-the sort of thing, but general farms when the the sort of the small farms the the only the sort of the small farms the the sort of the small farms the sort of the small farms the the sort of the small farms the sort of the small farms the sort of the small farms the sort of the sort of the small farms the sort of the small farms the sort of t

running the small farm. If combining our small farms to make large farms were practicable, then the Agricultural College at Gudph would largely solve the prol-lem, since the young men going there from year to year could be made man-agers of these large farms. However, when we have to face the problem of small farms, we must devise some method of taking education closer to the farmer's door. This, I take it, is the mission of the agricultural classes in the high schools. in the high schools.

Some years ago a competition was carried on in some 450 places in Can-ada to see just what the actual re-sults of using clean pure seed would sults of using clean pure seed would be. If we reason from the results ob-tained from it, we find that our grain yield last year would have been in-creased by 100,000,000 bushels had clean, vigorous seed been sowed on every acre under cultivation. Now, 180,000,000 bushels of grain would fill for whice of sultawe yearing agas. If 1,500 miles of railway grain cars.

Renew your subscription now.

Give the women and children all the comfort you can. They will be glad to assist you to do this. A Lawn Swing, in some shady place on your Lawn, is just the thing. You, Mr. Farmer, might enjoy it and spend a restful evening in it, after a hard day's work.

Get the boys and girls working together towards securing a Lawn Swing, FREE. Show your own copy of Farm and Dairy to your Neighbor. Tell them about its good points. Ask him to subscribe.

Lawn Swing for two adults or four children, strong and well made, selected from well seasoned hardwood lumber. The foot rest can be placed on level with the seat, thus forming a bed or hammock; uprights painted in a bright vermillion.

Given for a club of Nine New Yearly subscriptions to Farm and Dairy, at only \$1.00 each.
