THE COST OF LUBRICATION

Is The Cost of Lubricants Plus The Cost of The Friction Accompanying Their Use.

Friction is always at work, resisting motion, absorbing power, producing wear, even though it may not become excessive. To reduce friction to a minimum, Dixon's Flake Graphite is used, because it is the only successful lubricant that perfects the friction surfaces and actually prevents their contact. That is why the cost of friction is reduced when Dixon's Flake Graphite is used—That is why the cost of lubrication is reduced. Write for free sample No. C-33.

JOSEPH DIXON CRUCIBLE CO., Jersey City, N.J.

WEBSTER FEED - WATER HEATER, PURIFIER and FILTER

Back Pressure in a Feed-Water Heater is just like "balking" in a horse.

The appliance that permits it becomes a hindrance instead of a help.

Webster Heaters eliminate back pressure, and they heat the water to the highest point without inevitable waste of "thoroughfare" heaters. They work effectually, even when the steam is below atmospheric pressure.
