Addison, Thomas, M.D., 1793-1860, b. at Long Benton, near Newcastle, Eng., was educated at Newcastle Grammar-School and at the University of Edinburgh, where he graduated M.D. in 1815. He went to London and became connected, first as student, then as lecturer and physician, with St. George's Hospital, where he acquired a high reputation as a clinical teacher and did more than any of his colleagues to establish the fame of the hospital as a medical school. He never obtained a large practice as a physician, but devoted himself to teaching and original investigation. His researches on pneumonia were much in advance of his time, but his chief claim to medical fame rests on his discovery of the rare disease known as "Addison's disease," which was announced in his Essay on Disease of the Supra-Renal Capsules. 1. *Observations on the Disorders of Females*
