MY LUCKY DAY

Mr. Thomas Wylie (Box 384), Galt, says:--"It was the luckiest day of my life

when I struck PSYCHINE, for I truly be-

lieve I shouldn't be alive now but for that. "A neglected cold was the beginning

of my trouble, and what seemed to be a

simple ailment, soon developed into a seri-

ous and dangerous condition. I got so low

that it was scarcely possible for me to walk

around, and I lost so much flesh that I looked like a skeleton. I was just about ready to 'hand in my checks,' although

only 20 years of age. The medicine the doctor gave me m..de me worse and I got disgusted. Then I struck PSYCHINE.'' "PSYCHINE did miracles for me. The

first bottle gave me new life and cour ge,

and in less than no time I began to put on

flesh rapidly, and I felt I was on the high road

to recovery. My appetite returned, and I 'ate like a hunter,' as the saying goes

My friends were surprised, and hardly

knew me. In three months I was as strong

and well as ever, and returned to work in the mill. I have not had a day's illness

since. Nobody could wish for better health than I enjoy, and it is all owing to PSY-

CHINE. It should be in everybody's hands."

Throat, Lung and Stomach Trouble,

take Psychine. Druggists and Stores sell at 50c and \$1.00. Send to DR. T. A. SLOCUM, Limited, Spadina Avenue, Toronto, for a TRIAL FREE.

QUESTIONS AND ANSWERS. Miscellaneous.

SALSIFY DUG IN SPRING.

Is salsify (vegetable oyster) fit to eat, having remained in the ground over winter? It had grown about 4 inches of top when we raised it. Kindly inform us if it is like parsnip, unfit for use when it has grown. CONSTANT READER. Ans.-Salsify, or vegetable oyster, as it is sometimes called, is much like the parsnip in that it is improved by being left in the ground over winter for use in the spring. It is not quite so hardy as the parsnip, however, and is the better of a little covering on top, or protection of some kind to prevent it from thawing out during the winter when once it has been frozen. It is an erroneous idea that parsnips or salsify are unfit for use after they begin growing in the spring. The more they grow, however, the more nutriment of the root is used up in the pro duction of stalks, and in this way the quality of the vegetable is reduced; but so far as the changing the character of the root and making it poisonous or unfit for food is concerned, no change of this kind H. L. HUTT. takes place. O. A. C.

SUPERPHOSPHATE WORKS NEAR BROCKVILLE.

A good many years ago, a firm manufactured superphosphate, I think either in Belleville or Brockville. Can you tell us, in "The Farmer's Advocate," who owns the mine at present, from which the phosphate rock was taken, or the number of the lot, con. and township in which the mine is situated ?

W. J. C Ans .- The report of the Geological Survey of Canada for 1874-5, page 307, says: "Superphosphate works at Brockville were started in 1869, but since then nany additions have been made to them. The apatite employed is from the township of North Burgess, and is stated to contain an average of about 80 per cent of phosphate of lime." On page 109, o the same report, it is said : "The only other location in which any work was in progress was that on lots 11 and 12, in the seventh concession of North Burgess Here, on a property owned by A. Cowan apatite was being raised on contract work by Gerald (). Brown, the greater bulk of which was for the supply of Mr Cowan's superphosphate works at Elizabethtown, near Brockville." Your correspondent would have to ap-

ply to the Registrar at Perth in order to learn who is the present owner of the lots W. G. MILLER, referred to. Provincial Geologist.

PREPARING FOR TENNIS COURT.

A plot of fairly light sandy soil, from which about a foot of the surface has been removed in the process of levelling, Six imported bull calves from 9 to 14 months old, 3 reds and 3 roans. They are of such noted tamilies as Clara, Jilt, Roan Lady, Butterfly, Claret and Broadhooks. One imp. bull 2 years old, red; a most valuable sire. One bull 11 months old, roan, from imp. sire and dam; promising for a show bull. Two bulls 12 months old, from imp. sire and dam; suitable for pure-bred or grade herd. Also females all ages. Write for catalogue. Prices reasonable. Farm 1/4 mile from Burlington Junction station, G.T.R.

J. F. MITCHELL, BURLINGTON, ONT.

Imported Scotch Shorthorn Bulls

is to be prepared for use as a tennis court, to be ready next year, or earlier if possible. Kindly give directions as to depth to which soil should be worked, amount of fertilizer (also kind) required, the best kind of seed to use so as to produce a good sod as soon as possible. The plot is about $90 \ge 50$ feet, and has been exposed for about a year since top soil was removed.

Ans.-In the preparation of ground for a tennis court, or, in fact, a lawn of any kind, it is necessary where much levelling and grading has to be done to keep five or six inches of good surface soil on top to insure a luxuriant growth of grass. If the soil is not naturally rich, it may be mproved by application of well-rotted nanure or compost. This should be horoughly incorporated with the soil by cultivating or forking in. Light, sandy soils, such as you mention, are often deficient in potash, and are benefited by a liberal application of wood ashes. The more deeply and thoroughly the soil is worked, and the more fertilizer incorporated with it, the better the growth of grass when it has been seeded down. The best kind of seed to use is a mixture of equal parts, by weight, of red-top, blue grass, and white Dutch clover. This should be sown at the rate of about a pound to a square rod. Care should be aken to get an even distribution of seed it should be well raked into the soil, and if the season is dry, it should be rolled to insure quick germination. $H, \quad I = H \Gamma T T.$ O. A. C
