Asopia costalis. Of the first two, hundreds could have been collected on a single evening. Hadena lignicolor was unobserved on only one evening; Erastria carneola on only two evenings; Catocala ultronia and Hadena devastator on only three evenings.

The following species were common: A. herbida, A. haruspica, A. plecta, Orthodes infirma, Pseudothyatira expultrix, Hydroecia nictitans, Amphipyra pyramidoides and Erastria nigritula. Of Catocala ultronia about seventy examples in fine condition were captured; of Catocala nuptala, of which not a single example had ever before been taken by Mr. L., thirty-six were collected, and of Catocala parta sixteen examples had been secured, all in perfect condition. Specimens of Catocala Meskei, C. serena, C. Briseis, C. Clintonii, C. polygona and C. similis had also been obtained.

Mr. L. has become quite enthusiastic over the success with which he has met thus far, in the number of rare species collected, and particularly in the perfect condition in which the larger portion of them are obtained. It is his purpose to continue his collecting in this method, and also the tabulation of the results. The table, when completed at the end of the season, will probably be published in the New York State Museum Report. We are sure that it will prove a valuable contribution to that part of the natural history of our moths which relates to the number and duration of their several broods.

Mr. Mann exhibited specimens of the wood of Agave Americanum, which, when cut of the proper thickness, may be used as a substitute for cork. This wood is remarkably light and porous, and pins may with great ease be firmly pushed into its substance. It grows in Brazil, and can be obtained from Mr. Mann at a lower price than cork. In proof of the suitability of this material for the purpose named, Mr. Mann stated that Wallace preserved all his specimens collected in the East Indies in boxes made with pieces of this wood pinned together with thorns.

At a late hour this most enjoyable meeting was brought to a close.

On Thursday afternoon a large proportion of the members of the club joined in an excursion to some good collecting grounds in the neighborhood of Fort Wayne, the party being under the direction of Mr. Hubbard, of Detroit. A very pleasant and profitable time was thus spent, and many interesting specimens captured. In addition to the advantage enjoyed of closer social intercourse between the "brethren of the net," this occasion afforded an opportunity for the mutual exchange
