

"YOU'LL SUFFER ALL YOUR LIFE"

That's what the Doctor told him

"Fruit-a-tives Cured Him"

CHRISTMASVILLE, ONT., Jan. 25th 1911 "For over twenty years, I have been troubled with Kidney Disease, and the doctors told me they could do me no good, and that I would be a sufferer for the rest of my life."

I doctored with different medical men and tried many advertised remedies, but none of them suited my case.

Nearly a year ago, I tried "Fruit-a-tives". I have been using this fruit medicine nearly all the time since, and am glad to say that I am cured.

I give "Fruit-a-tives" the credit of doing what the doctors said was impossible.

I am now seventy-six years old, and in first class health!

GEO. W. BARKLEY.

In all the world, there is no other remedy that has cured so many cases of so-called "incurable" kidney disease, as "Fruit-a-tives".

This famous fruit medicine acts directly on the kidneys—restoring and strengthening them—and ridding the system of the waste matter that poisons the blood.

50c. a box, 6 for \$2.50, trial size, 25c. At dealers or sent on receipt of price by Fruit-a-tives Limited, Ottawa.

Maritime Provinces Progress Competition

(Letter written by Reginald A. Longley, of Paradise, for prize contest in Montreal Herald and Weekly Star, winning first prize of \$50.)

Sir.—In recent years our statements have spent no small amount of money in advertising the Canadian West, and great indeed have been the results.

Today we have the foundations of a great nation laid in those provinces where but recently the wilderness reigned supreme.

Our nation would not be complete however, without the Maritime Provinces; neither would it be complete should we fail to develop these provinces in such a way as to keep pace with our Western neighbors, which if we can do—and we most assuredly can—the present century is certainly ours!

ECONOMIC AND GEOGRAPHICAL ADVANTAGES.

As grand and as varied as are the advantages and resources of Western Canada, they in no way surpass those of our provinces down by the sea.

In fact these provinces are, in many respects, the most prominent as well as the most promising part of the Dominion today.

Where can we find another place in the world of the same area where Nature has been so bountiful with her gifts, and in so many respects, as in Nova Scotia, New Brunswick and Prince Edward Island?

Among our special advantages are splendid harbors, an unexcelled climate, great mineral wealth (especially in coal and iron), extensive forests, unsurpassed fisheries, deep rich soil, excellent schools and colleges, and a population second to none in the world.

Still another great advantage that must not be overlooked is the ease with which we can put our manufactured goods upon the markets of the world, and at a minimum cost.

Again we are a great deal nearer to the great markets of Europe than are the western provinces, and enjoy a similar advantage over our American cousins.

Upon what does the great strength and importance of Great Britain depend? Can we not trace it all to her great wealth in coal and iron and her excellent harbors? Give any country these three things and the future of that country is assured.

Can we not catch a glimpse, then, of the grand future which awaits our Maritime Provinces? For in addition to the three essential things above mentioned, viz., coal, iron and excellent harbors, we likewise have an abundance of wood, both hard and soft, supplying excellent material for building purposes, railway cars, furniture, farming implements, and various other manufactures.

NEEDS OF THE PROVINCES

What we need in these provinces is more careful attention to, and more skillful management of the following things: fisheries, mines, forests, poultry, grain, public roads and live stock.

Progress and prosperity, like other things, follow the lines of least resistance. For this reason we should give more time and attention to our public roads, especially in Nova Scotia.

By so doing, the value of our farm lands throughout the entire province would be enhanced.

employment to many men in the provinces and create home enterprises.

To put our forests on an equal footing with those of France and Germany would be no easy task; but it would not be an expensive undertaking, as the broken, crooked and fallen trees, when sold as cordwood, pulpwood and lumber, would more than defray all expenses.

A forest will respond to proper care just as quickly as will an orchard, and the returns and benefits resulting from this care and attention are really surprising.

When we consider that the forests of the United States will be practically exhausted by 1930, is it not high time that we begin to bestir ourselves in this matter and to handle our forests with prudence? What a chance we have to supply the great republic to the south of us with lumber and paper (not pulpwood)! Why continue to sleep, as it were, and thus fail to grasp such opportunities as these? Let us be up and doing; there is a work for every hand to do.

ENCOURAGE MANUFACTURERS. In the past we have made the great mistake of exporting our raw materials (chiefly to the United States) and then buying them right back as manufactured goods.

This, of course, so starved our home industries that large numbers of our finest young men, the pride and hope of our provinces, were compelled to seek employment to the south of the International boundary.

This exodus of our young men will continue just as long as we allow our raw materials to be exported, and are satisfied to import so many things needlessly, i. e., when it would be so much to our advantage to make them for ourselves.

Why then continue to pursue such a shortsighted policy when we have the men, money and ability necessary to establish new industries at home?

Conversely, as soon as we do this, i. e., establish home industries and can give employment to an ever-increasing number of men, many of our young people will return.

Look at the great armies of honest, yet unemployed men and women in Great Britain, the United States, and other countries. If these same people felt sure they could earn an honest living in these Maritime Provinces, many thousands of them would be here in less than four weeks.

By developing our natural resources, and thus being able to supply an abundance of labor and employment, we can not only check emigration from our provinces, but can more than double our population in the next quarter century.

THE TOURIST BUSINESS.

As a country for tourists, the Maritime Provinces are surpassed by few countries in the world. This business, however, is merely in its infancy as yet.

A railway on top of the North Mountain (which is remarkably level) from Windsor or Kingsport to Port Wade would be a wonderful advertisement for Nova Scotia, both for tourists and for permanent settlers.

It would be a about eighty miles long and about six hundred feet above the world-famed Annapolis Valley.

The scenery from this road would be simply enchanting.

None of our rivers are large, but several of them are of sufficient volume and velocity to supply an abundance of power for lighting and manufacturing purposes.

But by far the greatest source of power is in the great tides of the head-waters of the Bay of Fundy, where their change of level is from forty to sixty feet.

Here we have as much power and probably more than may be generated at Niagara Falls.

A grand scheme, and one which would build up the Maritime Provinces as a country never was built up since the dawn of history, would be to harness these Fundy tides.

The power so obtained could be used in our mines, ship yards, factories, homes and forests.

Every year we send large amounts of money to the United States, chiefly from our cities and larger towns, for early fruits and vegetables.

All this money could be kept in circulation among ourselves by having our early markets supplied with our own fruits and vegetables grown in green houses.

Why is it we find so very few such houses in our provinces when there is such a grand opening for business in this line? This exceptional demand for the products of the farm, especially in Nova Scotia, is made the larger by the thousands of people engaged in our fisheries, mines and lumber woods, and whose attention, therefore, cannot be given to farming or gardening.

Fertilizer and canned goods are other items which needlessly drain our provinces annually of many thousands of dollars.

We are in need of a fertilizer plant of sufficient capacity to meet our demands in full, for fertilizer is something we must continue to use in ever increasing quantities.

Several more canning factories could also be operated to splendid advantage.

HIS BLADDER WAS TERRIBLY INFLAMED

GIN PILLS Brought Relief

Larder Lake, Ont., March 26th. "I had been suffering for some time with my Kidneys and Urine. I was constantly passing water, which was very scanty, sometimes as many as thirty times a day. Each time the pain was something awful, and no rest at night."

I heard of your GIN PILLS and decided to give them a trial at once. I sent my chum 60 miles to get them and I am pleased to inform you that in less than six hours, I felt relief.

In two days, the pain had left me entirely. I took about half a box and today I feel as well as ever and my kidneys are acting quite natural again.

SID CASTLEMAN.

GIN PILLS soothe the irritated bladder—

heal the sick, weak, painful kidneys—and strengthen both these vital organs. Money back if they fail.

50c. a box, 6 for \$2.50. Sample free if you write National Drug and Chemical Co., of Canada, Limited, Toronto.

HOME INDUSTRIES NEEDED

Why not have centres of enterprise like Sydney and Amherst scattered all over our provinces? But this will never be as long as we are satisfied not to manufacture our own boots and shoes, cotton and woollen goods, furniture, cutlery, hardware, farming implements and many other things, all of which we possess unsurpassed facilities for manufacturing at home.

Our splendid opportunities for ship-building should also be utilized and developed.

In our provinces are many excellent opportunities for immigrants to secure good homes on very reasonable terms.

In order to direct more immigration to our shores and to provide homes for many people who otherwise would go west, these opportunities should be placed before the British public, and the results would be advantageous to all parties concerned.

By so doing, we could easily add many thousands to our population in the next ten years.

Next Term will begin Thursday, January 2nd. Send for Catalogue. S. KERR, Principal. HORACE GREELY'S FUNERAL. The day Horace Greely was buried at Greenwood cemetery, Nov. 29, 1872, stores were closed and houses along the route were draped in black. Flags on the shipping, in the harbor, were at half mast, and bells tolled from 1 to 3 o'clock. Two hundred and fifty carriages, containing the president of the United States, senators and other friends, were in the procession. It was one of the most notable funerals ever held in New York city. Tree Life. About one tree in each twenty planted lives to maturity. Soap Scraps. Put your small pieces of soap in a little bag and toss it in the wash boiler. When the washing is completed the undissolved pieces will still be in the bag for the next washday, instead of on the linen, where they are sure to make scorch places when ironed. The Alhambra. The ancient home of Spain's Moorish kings, the Alhambra at Granada, built in 1273, is falling to ruin. Eight of its magnificent towers were destroyed by the French many generations ago."
