Amatite ROOFING

THIS advertisement will
bring to your attention the best
and cheapest ready roofing on
the market. Here is how we
prove it the best.

In the first place Amatite is
made in one standard thickness,
whereas other ready roofings
range from a thin, flimsy
half-ply to a three-ply thickness.

The three-ply thickness (which
by the way is only one sheet
of felt) is the only kind that
can be compared with Amatite.
But right here is the point. Amatite is better
made, has better waterproofing material, and weighs
more per square foot than the three-

ply grade of other makes, and costs
much less.

These facts make Amatite the
most desirable roofing made.

But in addition to its superiority in
material and manufacture, Amatite
has one distinction which makes it
stand out above all others. It has a
real mineral surface.

It is hardly necessary to state the
advantages of such a mineral surface,
the freedom from painting or
coating, the perfect protection
against all kinds of weather, the
great durability.

This mineral surface is embedded
in a layer of Pitch, the greatest
known waterproofing material. Beneath
this in turn are two layers of
the best grade of wool felt—cemented
together by more Pitch, making
the whole a roofing that is absolutely
waterproof.

No other ready roofing can compare
with this mineral-surfaced,
waterproof, weather-proof, durable
roof. That's why we say—Don't
buy roofing until you have seen
it.
