

Wine of Creosote.

(SIMSON'S)

This elegant pharmaceutical preparation is manufactured by us with especial care as to the purity of its constituents and the methods of its compounding.

In its preparation, Merck's finest Beechwood Creosote is used, in combination with the purest sherry wine obtainable.

The well known antipathy which most patients have to taking Creosote often prevents its being used where most desirable. This objection is largely combatted by the employment of **Simson's Wine of Creosote**, which neither nauseates nor irritates, and which to a large extent conceals the taste of the Creosote itself.

Strength—4 minims to the ounce.
