

THE SEMICIRCULAR CANALS.

On the Physiology of the Semicircular Canals and Their Relation to Sea Sickness, by Joseph Byrne, A.M., M.D., LL.B. New York: J. T. Dougherty. London: H. K. Lewis. 1912.

The author, with much care, discusses the anatomy and physiology of the semicircular canals, and their relationship to sea sickness. He basis his conclusion on clinical and experimental evidence. The book is a highly scientific and valuable contribution to medical progress. Though the work is of a scientific character it is by no means uninteresting reading. This work should receive much attention from those engaged on the physiology and diseases of the ear.

MR. TUBBY ON DEFORMITIES.

Deformities, including Diseases of the Bones and Joints. A Text-book of Orthopedic Surgery, by A. H. Tubby, M.S., Lond., F.R.C.S., Eng., Surgeon to and in charge of the Orthopedic Department, Westminster Hospital, and Lecturer on Clinical and Orthopedic Surgery in the Medical School, Surgeon to the Royal National Orthopedic Hospital, Consulting Surgeon to the Evelina Hospital for Sick Children, to Christ's Hospital and the Sevenoaks Hospital for Hip Disease, Corresponding Member American Orthopedic Association. Second edition. Illustrated by 70 plates and over 1,000 figures, of which nearly 400 are original, and by notes of 54 cases. In two volumes. Macmillan & Co., Ltd., St. Martin's Street, London. Price, 45s net.

The evolution of books is one of the most fascinating of studies.

It is wonderful, indeed, to see how they grow and change. This is specially true of the two volumes before us. The material has greatly increased, the illustrations have been recast to a very great extent, and the text has been almost rewritten. All this for the better. This is one of the most complete and perfect works, not only on orthopedic surgery, but on any subject in the whole range of medical or surgical subjects. Mr. Tubby has been before the medical world for many years as one of its very best examples of a specialist. He has been an ardent student of his work, a keen observer of disease, and one who uses both for the treatment of suffering in a most scientific and practical way. All this we find in these two volumes. To the specialist these volumes are indispensable, and for the general practitioner they are most valuable, as there are so many cases of this class that he can and should handle himself. In the hands of Mr. Tubby these volumes will undergo change and improvement, though it would seem to the reader impossible to see how this could be done. In these volumes we find that the drawing, the photograph, and the skiagraph have been used freely in illustrating their pages. These illustrations are among the finest to be found in any
